The ceiling ventilation 200 series

GAGGENAU

A quietly powerful statement

The private chef does not appreciate being distracted by vapour, odour, heat or even the hood. Therefore, the ceiling ventilation 200 series offers three effective solutions that are out of the chef's way and field of vision. Quietly effective, their high performance, energy saving fans can be easily controlled via the cooktop and even automatically adjust themselves according to the amount of vapour in the air.

Free hanging lift hood

This is ceiling ventilation that travels to the cooktop. Emerging from within the ceiling or from upon it, the private chef can lower the sophisticated structure closer to the source of the odour and vapour. Up close, the clean lines and perfect form of the Gaggenau Black anodized aluminium extractor impresses both visually and in its operation.

Conveniently, the mounting plate enables straightforward installation while the odour and grease filters are easily accessible. Dimmable, neutral white LED's can illuminate or add atmosphere and, coupled with the motorised function, transform the necessity of ventilation into an unlikely performance art.

Surface mounted

The rim extractor integrates with the room's architecture, complementing any kitchen design with its Gaggenau Light Bronze tone and minimalist, brushed-finished surface.

Crafted from precision aluminium and housing a quiet, energy efficient fan, it is also simple to install. Requiring no ceiling preparation or ducting, simply add electricity and you have a comprehensive, instant, solution to ventilation.

Integrated

The impressive 120 cm extractor is large yet discreet, being embedded within the ceiling. Its ability to extract or recirculate the air as well as its sophisticated design ensures functional and aesthetic unification into any kitchen environment.

Straightforward to install and easy to maintain, the extractor's flawless expanse of Gaggenau Light Bronze attracts the eye as well as vapours.
