

## Cooktops

The flex induction cooktop with integrated ventilation system 200 series

**GAGGENAU**

## Exceptionally flexible induction

The flex induction cooktops are for the enthusiasts who want to express themselves beyond the restrictions of the normal sized cooking zone. For larger pans or accessories such as the griddle or Teppan Yaki plate, touch a button and merge two zones into one large one. The frying sensor function enables gentler frying, gradually increasing the heat and keeping it constant so as to avoid overheating. Attaching the cooking sensor allows you to totally control the temperature within the pot and avoiding over boiling. Alternatively, set the cooktop to the Professional cooking function and different areas of the cooktop will be pre-set to high, medium and low. Simply move the pans to your desired heat.

A display with a clean design in white and orange, only indicates the functions that can be used, ensuring intuitive operation. Functions are controlled by the magnetic knob, which simply lifts off when cleaning the cooktop and is available in black as a special accessory.

As the name suggests, this induction has one more major ability: ventilation.

## Subtly integrated ventilation

Available in air recirculation or air extraction mode, the private chef can simply set the extractor to automatic as they focus on the cuisine. The extractor then detects and removes any unwanted vapour in the atmosphere, even once the cooking is complete. An energy efficient, powerful motor works in tandem with airflow ducting to ensure minimal volume of both noise and space, as well as maximum effectiveness: odours are removed during air recirculation thanks to the activated charcoal filters.

The large metal grease filters are easy to remove and dishwasher-safe and the use to Home Connect ensures you will be alerted to when charcoal filters need replacing and click through to purchase the exact type online.

Simple to install, this is a highly efficient, all-round, solution in every kitchen plan.

## Cooktops 200 series

### Flex induction cooktop with integrated ventilation system

#### Type reference

CV 282

**A** <sup>\*</sup>

#### Width

80 cm

#### Finish

Frameless or stainless steel frame

#### Mode

Air recirculation & air extraction

\* On an energy-efficiency class scale from A+++ to D.

The difference is Gaggenau.
