

THE NEW GENERATION OF
COOLING

GAGGENAU

THE PINNACLE OF COOLING

**At the heart of the new generation of cooling
is a professional freshness system.**

Engineered to deliver ideal storage conditions, the design features a chilled drawer and two fresh climate drawers, complementing a spacious cooling compartment.

Together, they provide independent temperature and humidity controls to create tailored climates for all types of produce. Dedicated automatic cooling programmes, an ethylene absorber, and advanced air filtration work in harmony to extend the freshness of your ingredients.

The expansive freezing compartment incorporates cutting-edge technology, ensuring your culinary treasures are safeguarded against freezer burn and oxidation.

PROFESSIONAL FRESHNESS SYSTEM

Five distinct climate zones, each meticulously engineered to preserve the freshness, flavour, and nutritional integrity of your ingredients. From crisp greens to delicate dairy, every item finds its ideal environment.

The fresh climate drawers feature independent temperature controls to extend the life of more sensitive produce, keeping it up to three times fresher than in the cooling compartment.

Advanced ethylene absorbers work to neutralise ripening gases, ensuring fruits and vegetables retain their natural vitality.

Customisable humidity and temperature settings, accessed via an intuitive touch display, allow you to tailor the fresh climate drawers for various storage needs.

Automatic cooling programmes maintain optimal storage conditions, eliminating guesswork and prolonging the storage of produce, meats, and fish.

FREEZING MASTERY

The spacious freezing compartment features three drawers and an integrated ice maker, ensuring your finest ingredients are protected from freezer burn and oxidation.

Freezer burn protection minimises moisture loss when freezing items, preserving texture and flavour. Oxidation protection significantly slows discolouration and maintains optimal taste and aroma. With lower freezing temperatures, seafood and other delicate items retain their quality for twice as long as conventional storage.

Automatic fast freezing reacts intuitively to temperature changes, swiftly preserving newly added items. This feature ensures that food remains optimally preserved, even when warm items are added.

A TOUCH OF EXTRAORDINARY

Designed for convenience and clarity, the large TFT display eliminates the need to consult a user manual, offering immediate guidance and animated quick guides for maintenance. Additional information layers explain set temperatures, benefits of compartments, modes and programmes.

Home Connect enables you to save custom programmes and tailor settings to suit your preferences. Create a shopping list with predefined items, select ingredients from your inventory, and discover curated recipes that inspire. Remote diagnostics ensure the appliance operates with precision, delivering performance that meets the highest standards of excellence.

With seamless smart home integration, your cooling appliance becomes an indispensable part of your culinary experience. Discreet integrated cameras allow you to effortlessly control it from anywhere via your mobile device, offering a connected experience beyond your home.

BRILLIANCE. UPSTAGED

The interior is a testament to refined craftsmanship, showcasing dark brushed stainless steel and solid anthracite aluminium elements. From the flat inner doors to the aluminium-framed glass shelves, drawers, and door bins, every detail reflects an unwavering commitment to material excellence.

Purposefully selected and meticulously crafted, these high-quality materials are designed to withstand the test of time, transforming the appliance into a visual masterpiece. The handleless door option ensures seamless integration into any kitchen design, elevating your space with an appliance that transcends mere utility.

As the doors open, the light within the cooling compartment comes to life, revealing a captivating display of your culinary treasures.

The brilliance of this new generation lies in its intuitive design. Warm-white, glare-free lighting adapts seamlessly to ambient conditions and drawer interactions, always presenting your ingredients in the most flattering light across all cooling and freezing compartments.

Allow the adaptive light to guide your experience as the surrounding compartments gently dim, adding drama as you open a drawer. The overall light intensity adjusts to suit the brightness of your living space, while the display subtly highlights the compartment you have selected. Every moment is effortlessly refined.

THE APPLIANCE

**Fridge-freezer combination
dark brushed stainless steel**
