

Since 1683, Gaggenau has been driven time and again to achieve outstanding performance. Accomplishments that exceed even the highest expectations regarding design and architecture are what we consider standard.

Our 400 series ventilation boasts a variety of design options and allows the focus to remain on what matters most in the kitchen—producing meals that are sure to impress. Its quiet and efficient technology is further complemented by sculptural design. Different models ensure the right technical fit for every spatial situation. Superior technology, aesthetic perfection, high-quality materials, the 400 series ventilation incorporates what Gaggenau has always stood for: Design quality, tradition and system excellence.

The difference is Gaggenau.

The difference is Gaggenau.
The new 400 series ventilation.

The control knob defines our attitude visibly and tangibly in the smallest possible space: Usability and design always go hand in hand. Solid materials, a high-precision finish and unrivalled touch turn a simple control knob for the downdraft ventilation into a design object.

The baffle filter was originally developed for professional kitchens. Full-surface polished stainless steel reflects quality, durability and functional elegance. Slanted positioning of the filters ensures that maximum surface is available for efficiently trapping vapors. The filter also achieves outstanding results when it comes to absorbing grease. The baffle filter is integrated in the new AW 442 professional wall-mounted hood as well as in the AI 442 professional island hood.

The AL 400 retractable downdraft is the ideal solution for open-plan spaces and kitchen islands. Up and running in no time and demonstrating its effectiveness at extracting vapors directly at the cooktop, it disappears again just as quickly into the counter-top when not in use.

Sophisticated product design always considers the spatial requirements. Thanks to different ventilation types, our sophisticated appliances are ideally matched to those requirements and preferences. Every form follows its function.

The AI 442 island hood and the AW 442 wall-mounted hood put the cooktop surface in the right light thanks to flush LEDs. With a 3-millimeter stainless steel full panel, they perfectly match to the appliances of the Vario 400 series cooktops.

The VL 414 downdraft ventilation is ideal for expansive architecture and kitchen islands. It quietly and effectively extracts vapors and odors directly from where they arise. Whether surface or flush-mounted, its installation is simply a matter of taste.
