Planning notes

The door panel surface of the appliance extends 40 mm from the furniture cavity.
The outer edge of the door handle extends 90 mm from the furniture cavity.
For installation underneath cooktops: Distance between the underside of the cooktop and the top edge of the oven cavity: min. 15 mm.
The planning notes for the cooktops (particularly regarding ventilation, gas/electric connection) must be taken into account.
To achieve the 550 mm installation depth, the connection cable needs to follow the slanted edge on the corner of the housing.
The mains socket needs to be planned outside the built-in niche.

Connection

Energy efficiency class A at a range of energy efficiency classes from A+++ to D.
Total connected load 5.4 kW.
Plan a connection cable.

Checklist for appliance combinations 400 series

This checklist provides the most relevant parameters for the perfect combination and ordering of ovens, Combi-steam ovens, Combi-microwave ovens, fully automatic espresso machine, vacuuming drawers, warming drawers and dishwashers.

In general:

- ☐ All appliances shown can be obtained with stainless-steel-backed full glass doors.
- ☐ When several appliances are listed (BS/BM and DV/WS), the first appliance is shown.

Vertical combinations

When planning and ordering please note that

- ☐ The door hinges of the appliances must be on the same side.
- ☐ The door hinge (right-/left-hinged) is not reversible.
- ☐ The width of the appliances is identical.
- ☐ The control modules of the two appliances should meet each other in the middle of the combination.
- ☐ No further appliances may be fitted above the BS.
- ☐ Only appliances with controls at the top can be installed above a dishwasher. The niche for appliances that are installed above it must be 56 cm wide. The dishwasher is 60 cm wide. A stainless-steel-backed full glass door can be obtained as a special accessory.

Horizontal combinations

When planning and ordering please note that

- ☐ The door hinges need to be placed on the outside in order to use the full available door opening angle.
- ☐ The door hinge (right-/left-hinged) is not reversible.
- ☐ A minimum clearance of 10 mm between the two doors must be observed.
- ☐ Combi-steam ovens, Combi-microwave ovens and fully automatic espresso machine in combination with a vacuuming drawer or a warming drawer (14 cm in height) have the same total height as a 60 cm wide oven.
- ☐ The control modules are either all at the top or all at the bottom.

Planning notes for the installation of ovens and oven combinations 400 and 200 series

General notes

Installation behind kitchen furniture doors

Appropriate measures must be taken to prevent these types of doors from closing when the appliance is heating or while it is cooling down (fan operation).

Combination of ovens and Vario cooling 400 series appliances

Please check the planning notes in the information for Vario cooling 400 series appliances in order to prevent the refrigerator door from colliding with the oven.

Installation side by side

When appliances are installed side by side, the clearance between the appliances must be at least 10 mm (corresponds to the standard outside measurement of the furniture cavity of 600 or 762 mm). The door hinges need to be placed outside in order to use the full available door opening angle.

Necessary air cross section at the door edges

Gaggenau ovens are cooled with fresh air at the top edge and side edges of the door. Hot air is blown out at the door bottom edge. Combi-steam ovens and Combi-microwave ovens have the air inlet at the side edges of the door and the hot air and steam outlets at the top edge of the door. In order to prevent appliances from overheating and to ensure that they cool down as required after operation, appropriate minimum cross sections of free space must be maintained from kitchen furniture edges.

The measurements given in the drawing apply to all appliances. The following must also be observed:

The area above the appliances

BS:

No other electrical appliances should be installed above the BS. It is recommended that a horizontal handle is not fitted on furniture above the BS.

Where the edge of a kitchen unit protrudes more than 20 mm from the front edge of the furniture cavity, the edge of the kitchen furniture panel must be steam resistant as is the case above a dishwasher. Steam may possibly penetrate into the compartment.

The area below the appliances

DV / WS:

It must be ensured that there is sufficient access to the lower edge of the vacuuming drawer and warming drawer, if the thickness of the kitchen furniture door is greater than 20 mm in front of the furniture cavity.

When installed next to each other

Cross section of the top/bottom door edge gaps

At the sides

In cases where kitchen furniture door thicknesses are greater or where sidewalls protrude up to 34 mm from front of the edge of the furniture cavity, the minimum distance on the hinge side is sufficient for the air supply and a door opening angle of 120°. Above that, a distance of 10 mm or even more is required.

The handle side may, if required, be covered by a side panel provided that the minimum distance is maintained.

The door panel surface of the appliance extends 47 mm from the furniture cavity.

The outer edge of the door handle extends 94 mm from the furniture cavity.

Consider the overhang, incl. the door handle, when planning to open drawers next to the appliance.

When planning a corner solution, pay attention to the 90° door opening angle.

To achieve the 550 mm installation depth, the connection cable needs to follow the slanted edge on the lower right hand corner of the housing.

The mains socket needs to be planned outside of the built-in niche.

Please read the installation details regarding combination with ovens on the page 14/15.

Planning notes

Door hinge not reversible.

The door panel surface of the
appliance extends 47 mm from the
furniture cavity.

If the handle (optional accessory) is
retrofitted, the outer edge of the door
handle extends 94 mm from the
furniture cavity.

Consider the overhang, incl. the door
handle where applicable, when
planning to open drawers next to the
appliance.

When planning a corner solution, pay
attention to the 90° door opening
angle.

To achieve the 550 mm installation
depth, the connection cable needs to
follow the slanted edge on the lower
right hand corner of the housing.
The mains socket needs to be planned
outside of the built-in niche.

Please read the installation details
regarding combination with ovens on
the page 14/15.

Checklist for appliance combinations 200 series

This checklist provides the most relevant parameters for the perfect combination and ordering of ovens, Combi-steam ovens, steam ovens, Combi-microwave ovens, microwaves, fully automatic espresso machines, warming drawers and dishwashers.

When several appliances are listed (BSP/BMP), the first appliance is shown.

Vertical combinations

When planning and ordering please note that

- ☐ The door hinges of the appliances must be on the same side.
- ☐ The door hinge (right-/left-hinged) is not reversible.
- ☐ No further appliances may be fitted above the BSP.
- ☐ Only appliances with controls at the top can be installed above a dishwasher. The niche for appliances that are installed above it must be 56 cm wide. The dishwasher is 60 cm wide.

Horizontal combinations

When planning and ordering please note that

- ☐ The door hinges can be located on either the inside or outside, without the full door opening angle being restricted.
- ☐ The door hinge (right-/left-hinged) cannot be reversed retrospectively.
- ☐ A minimum clearance of 10 mm between the two doors must be observed.
- ☐ Combi-steam ovens, steam ovens, Combi-microwave ovens, microwaves and fully automatic espresso machines in combination with a warming drawer (14 cm in height) have the same total height as a 60 cm wide ovens.

Planning notes

Door hinge not reversible.

The door panel surface of the appliance extends 21 mm from the furniture cavity.

The outer edge of the door handle extends 72 mm from the furniture cavity.

Necessary lateral gap between appliance door and furniture panel of min. 5 mm.

Consider the overhang, incl. the door handle, when planning to open drawers next to the appliance.

When planning a corner solution, pay attention to the 110° door opening angle.

For installation underneath cooktops: Distance between the underside of the cooktop and the top edge of the oven cavity: min. 15 mm.

The planning notes for the cooktops (particularly regarding ventilation, gas/electric connection) must be taken into account.

To achieve the 550 mm installation depth, the connection cable needs to follow the slanted edge on the corner of the housing.

The mains socket needs to be planned outside of the built-in niche.

Please read the installation details regarding combination with ovens on the page 14/15.

Connection

Energy efficiency class A at a range of energy efficiency classes from A+++ to D.

Total connected load 3.7 kW.

Planning notes

Door hinge not reversible.

The door panel surface of the
appliance extends 21 mm from the
furniture cavity.

The outer edge of the door handle
extends 72 mm from the furniture cavity.
Necessary lateral gap between
appliance door and furniture panel of
min. 5 mm.

Consider the overhang, incl. the door
handle, when planning to open
drawers next to the appliance.

When planning a corner solution, pay
attention to the 110° door opening
angle.

For installation underneath cooktops:
Distance between the underside of the
cooktop and the top edge of the oven
cavity: min. 15 mm.

The planning notes for the cooktops
(particularly regarding ventilation, gas/
electric connection) must be taken into
account.

To achieve the 550 mm installation
depth, the connection cable needs to
follow the slanted edge on the corner
of the housing.

The mains socket needs to be planned
outside the built-in niche.

The LAN port can be found at the back
on the upper right side.

Please read the installation details
regarding combination with ovens on
the page 14/15.

Planning notes

Depending on the type of installation (surface-mounted or flush-mounted), the specific location of the cut-out and the knob positions may vary.
The horizontal positioning of the knobs may be aligned with the specific cooking areas and zones.
The drawing "Installation of the control knob" must be observed if the panel is more than 23 mm thick (there must be a recess at the rear).
If installing filler strip VA 450 take into account the additional space required for the depth.

If combining several appliances with at least one appliance cover, the filler strip VA 450 is required to compensate for the depth of the appliance without the appliance cover.

If combining several Vario appliances of the 400 series, a connection strip VA 420 must be placed between the appliances. Depending on the type of installation, the corresponding connection strip must be provided.
In the cut-out, the installation system requires the side edge to be at least 10 mm for surface mounting and at least 13 mm for flush mounting. Ensure a continuous cut surface of 90°.
The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads.
Additional instructions for flush mounting:

Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.

The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining.
The joint width may vary due to size tolerances of the combinations and of the worktop cut-out.

Please read additional planning notes on page 118 – 123.

If installing several appliances in individual cut-outs allow for a division bar of minimum 50 mm between the individual cut-outs.
Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended.
Appliance can be snapped into the worktop from above.
Appliance weight: approx. 25 kg.

Please read the installation details regarding air ducting on page 180.

Connection

Total connected load 11.1 kW.
Connecting cable 1.5 m without plug.

Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer. The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining.
The joint width may vary due to size tolerances of the combinations and of the worktop cut-out.

Please read additional planning notes on page 118 – 123.

If installing several appliances in individual cut-outs allow for a division bar of minimum 50 mm between the individual cut-outs.
Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended. The wok pan WP 400 001 cannot be used with this appliance.
Intermediate shelf is recommended, but should be removable for customer service needs.
Appliance can be snapped into the worktop from above.
Appliance weight: approx. 29 kg.

Please read the installation details regarding air ducting on page 180.

Planning notes

Depending on the type of installation (surface-mounted or flush-mounted), the specific location of the cut-out and the knob positions may vary.
The horizontal positioning of the knobs may be aligned with the specific cooking areas.
The drawing "Installation of the control knob" must be observed if the panel is more than 23 mm thick (there must be a recess at the rear).
If installing filler strip VA 450 take into account the additional space required for the depth.
If combining several appliances with at least one appliance cover, the filler strip VA 450 is required to compensate for the depth of the appliance without the appliance cover.

If combining several Vario appliances of the 400 series, a connection strip VA 420 must be placed between the appliances. Depending on the type of installation, the corresponding connection strip must be provided. In the cut-out, the installation system requires the side edge to be at least 10 mm for surface mounting and at least 13 mm for flush mounting. Ensure a continuous cut surface of 90°. The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. Additional instructions for flush mounting:

Depending on the type of installation, the corresponding connection strip must be provided.

In the cut-out, the installation system requires the side edge to be at least 10 mm for surface mounting and at least 13 mm for flush mounting. Ensure a continuous cut surface of 90°.

The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. Additional instructions for flush mounting:

Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.

The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining.

The joint width may vary due to size tolerances of the combinations and of the worktop cut-out.

Please read additional planning notes on page 118 – 123.

If installing several appliances in individual cut-outs allow for a division bar of minimum 50 mm between the individual cut-outs.

Special nozzles can be ordered as spare parts.

Plan for an electrical connection (the appliance is not operable without power supply).

Air intake from above.

No intermediate shelf required.

Rear panel and wall trims must be heat-resistant and consist of a non-flammable material.

A minimum clearance of at least 150 mm from adjacent heat-sensitive furniture or contact surfaces must be observed or thermal insulation fitted.

If operated next to the downdraft ventilation VL 414, the air baffle AA 414 is recommended to ensure maximum performance of the cooktop.

With a total connected load of more than 11 kW local regulations concerning room ventilation, room size and combination of extraction or recirculation hoods must be observed. Minimum clearance between gas cooktop(s) with more than 11 kW and ventilation hood 70 cm.

Appliance can be snapped into the worktop from above.

Appliance weight: approx. 14 kg.

Connection

Total connected load gas 6.0/6.0 kW.

Total connected load electric

15.0/15.0 W.

Connecting cable 1.4 m with plug.

- Cooking directly on the hard-chromed metal surface, without any pots or pans
- Exact temperature control up to 240 °C
- Optimum heat distribution
- Solid stainless steel control knob
- Precision crafting of 3 mm stainless steel
- For surface mounting with a visible edge or for flush mounting
- Can be combined perfectly with other Vario appliances of the 400 series

Cooking zones

Usable area W 31 x D 44 cm.

Handling

Control knobs with illuminated ring, cooking zone and temperature markings.

Electronic temperature control from 120 °C to 240 °C.

Features

Two zones, each 1500 W, can be operated together as a complete surface or each half separately. Keeping warm setting. Even with traces of use, always easy to clean like a cast pan.

Safety

Safety shut-off.

Planning notes

Depending on the type of installation (surface-mounted or flush-mounted, with or without an appliance cover), the specific location of the cut-out and the knob positions may vary.

If installing with the appliance cover VA 440 or filler strip VA 450 take into account the additional space required for the depth.

If combining several appliances with at least one appliance cover, the filler strip VA 450 is required to compensate for the depth of the appliance without the appliance cover.

If combining several Vario appliances of the 400 series, a connection strip VA 420 must be placed between the appliances. Depending on the type of installation, the corresponding connection strip must be provided.

In the cut-out, the installation system requires the side edge to be at least 10 mm for surface mounting and at least 13 mm for flush mounting. Ensure a continuous cut surface of 90°.

The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. Additional instructions for flush mounting:

- Flexible power distribution, precise extraction of cooking vapours only at the open ventilation elements
- Can be combined perfectly with other Vario appliances of the 400 series
- Precision crafting of 3 mm stainless steel
- For surface mounting with a visible edge or for flush mounting
- Motorless, can be combined with Gaggenau BLDC remote fan units

Output

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

Manual opening of the ventilation element.
Closing element made of stainless steel, dishwasher-safe.
Metal grease filter, dishwasher-safe.
No connecting piece included.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 403 122.

Max. output of cooktops 18 kW.
In combination with the cooktop CI 290, installation in 60 cm deep worktops is possible.
Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.

The remaining surface of the worktop (min. 50 mm) between the cut-outs must be reinforced with a support. It is recommended to use furniture support AA 409 401/431.

Ovens that do not exceed the maximum allowed cabinet temperature can be combined with the table ventilation if built-in situation permits.

To avoid smoke when frying/grilling refer to the manuals of VR/VP.

When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

Cut-out dimensions for appliance combinations in the 400 series. Flush mounting.

The drawings listed below show the cut-out dimensions for appliance combinations in the 400 series for a flush mounting. While taking into consideration the previous page and the drawings specified below, the installer can define the suitable cut-out dimensions. The combinations listed here are only sample combinations.

Depending on the installation situation (with or without cover/filler strip), the following connection strips must be provided:
VA 420 000 for a flush mounting **without** appliance cover/filler strip.
VA 420 001 for a flush mounting **with** appliance cover/filler strip.

If installing with the VA 440 appliance cover or VA 450 filler strip, take into account the additional space required for the depth. Furthermore, you must ensure that there is an asymmetrical alignment in the cut-out depth.

Cut-out depth based on the installation situation with or without appliance cover/filler strip.

All appliances with a width of 38 cm can be equipped with a stainless steel appliance cover.
If combining several appliances with at least one appliance cover, the VA 450 filler strip is required to compensate for the depth of the appliance without the appliance cover and to have a continuous cut-out.

When installing with appliance cover or filler strip, depending on the mounting situation (surface or flush), the following connecting strips must be provided:

VA 420 011 for a **surface mounting** with appliance cover/filler strip.

VA 420 001 for a **flush mounting** with appliance cover/filler strip.

If installing with the VA 440 appliance cover or VA 450 filler strip, take into account the additional space required for the depth. Furthermore, you must ensure that there is an asymmetrical alignment in the cut-out depth.

Vario downdraft ventilation 200 series

VL 200

- Can be combined with the cooktops of the Vario 200 series to a harmonic unity
- Highly efficient ventilation system at the cooktop integrated in the worktop
- Function for automatic, sensor-controlled power adjustment depending on the build-up of cooking vapours
- Minimal planning and easy installation
- Low-noise system with the motor AR 410 110
- Air extraction or air recirculation system

Output

Performance and noise level, output level 3/Intensive:

Air output according to EN 61591.

Sound power level according to EN 60704-3.

Sound pressure level according to EN 60704-2-13.

Odour reduction for air recirculation in accordance with EN 61591.

Configuration with the remote fan unit AR 410 110: air recirculation
453 / 565 m³/h.

68 / 73 dB (A) re 1 pW.

53 / 58 dB (A) re 20 µPa.

Odour reduction 90% with activated charcoal filter / 86% with regenerable activated charcoal filter

Configuration with the remote fan unit AR 413 122: air recirculation
496 / 642 m³/h.

72 / 79 dB (A) re 1 pW.

57 / 63 dB (A) re 20 µPa.

Odour reduction 87% with activated charcoal filter.

Configuration with the remote fan unit AR 403 122: air extraction
581 / 723 m³/h.

73 / 78 dB (A) re 1 pW.

58 / 63 dB (A) re 20 µPa.

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

Control knobs with illuminated ring.

3 electronically controlled power levels and 1 intensive mode.

Automatic function with sensor-controlled run-on function.

Large-scale metal grease filter with high grease absorption.

Grease filter, dishwasher-safe.

Grease filter and activated charcoal filter saturation indicator.

Airflow-optimised interior for efficient air circulation.

Interval ventilation, 6 min.

Enamelled ventilation grille, dishwasher-safe.

Air exhaust bend included in delivery. Overflow 250ml capacity.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 403 122.

Energy efficiency class A+ at a range of energy efficiency classes from A++ to E.

Energy consumption 39.7 kWh/year.

Ventilation efficiency class A.

Illumination efficiency class -.

Grease filter efficiency class B.

Sound level min. 58 dB / max. 73 dB normal mode.

Planning notes

Air recirculation mode in combination with remote fan unit with AR 410 110 or AR 413 122.

Air extraction in combination with remote fan unit AR 403 122.

Please refer to page 236 – 238 for recommended configurations of downdraft ventilations and remote fan units and the needed ducting elements. Maximum cooktop width between 2 VL: 60 cm.

If installed next to gas appliances, the ventilation moulding LS 041 001 is recommended to ensure maximum performance of the cooktop.

When having installed the ventilation moulding LS 041 001 the wok pan WP 400 001 can not be used.

When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

Please read additional planning notes on page 131.

Connection

Connecting cable 1.7m between VL and remote fan unit.

2 two-ring high output burners
(165 W – 4000 W), suitable for pots up to max. ø 28 cm.
2 two-ring standard burners
(165 W – 2000 W), suitable for pots up to max. ø 24 cm.

Handling

Control knobs with illuminated ring, cooking zone and output level markings.
One-handed operation.
Full electronic control in 12 output levels for exact power level regulation plus simmer function.
Automatic fast ignition.

Features

Simmer function.
Three-part cast iron pan support with flat, continuous pot surface, on the same level as the worktop.
Brass burner rings.

Safety

Electronic flame monitoring with automatic re-ignition.
Residual heat indication.
Safety shut-off.

Planning notes

The frame set (necessary installation accessory) can be sent in advance to the manufacturer of the stainless steel or granite worktop for fitting.
Special nozzles can be ordered as spare parts.
Plan for an electrical connection (the appliance is not operable without power supply).
The horizontal positioning of the knobs may be aligned with the specific burners.
The drawing "Installation of the control knob" must be observed if the panel is more than 23 mm thick (there must be a recess at the rear).
Minimum worktop depth 70 cm.

Air intake from above.

No intermediate shelf required.
Due to the separate frame welded into the worktop, all parts remain fully accessible.

Rear panel and wall trims must be heat-resistant and consist of a non-flammable material.
The appliance can be fixed from above.
A minimum lateral clearance of at least 300 mm from adjacent heat-sensitive furniture or contact surfaces must be observed or thermal insulation fitted.
Cooktop clamping range: 40 – 50 mm.
With a total connected load of more than 11 kW local regulations concerning room ventilation, room size and combination of extraction or recirculation hoods must be observed.
Minimum clearance between gas cooktop(s) with more than 11 kW and ventilation hood 70 cm.
The combination with VL 414 is not recommended, since the air extraction from the centre burner cannot be guaranteed due to the distance.
Appliance weight: approx. 35 kg.

Connection

Total connected load gas up to 17.8/18.0 kW.
Total connected load electric 15.0/15.0 W.
Connecting cable 1.4 m with plug.

For further installation options, see the installation instructions

Planning notes

Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended. The wok pan WP 400 001 cannot be used with this appliance. Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.

The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining. Intermediate shelf is recommended, but should be removable for customer service needs.

Appliance must be fixed from underneath.

Cooktop clamping range: 30 – 50 mm. Joint width may vary due to dimensional tolerances of the glass ceramic cooktop and the worktop cut-out. Appliance weight: approx. 28 kg.

Please read additional planning notes on page 180.

Planning notes

Depending on the type of installation (surface-mounted or flush-mounted), the specific definition of the cut-out must be observed.

If combining several appliances with at least one appliance cover, the filler strip VA 450 is required to compensate

for the depth of the appliance without the appliance cover.

If combining several Vario appliances of the 400 series, a connection strip VA 420 must be placed between the appliances. Depending on the type of installation, the corresponding connection strip must be provided. In the cut-out, the installation system requires the side edge to be at least 10 mm for surface mounting and at least 13 mm for flush mounting. Ensure a continuous cut surface of 90°.

The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. Additional instructions for flush mounting:

Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer. The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining. The joint width may vary due to size tolerances of the combinations and of the worktop cut-out.

Please read additional planning notes on page 118 – 123.

If installing several appliances in individual cut-outs allow for a division bar of minimum 50 mm between the individual cut-outs.

Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended. The wok pan WP 400 001 cannot be used with this appliance.

Intermediate shelf is recommended, but should be removable for customer service needs.

Appliance can be snapped into the worktop from above.

Appliance weight: approx. 29 kg.

Please read the installation details regarding air ducting on page 180.

Safety shut-off.
Detachable, dishwasher-safe two-stage overflow protection.
Removable overflow container, 2-litre capacity, dishwasher-safe.
Grease filter detection.

Planning notes

Bottom cabinet width: min. 80 cm.
Worktop depth: min. 60 cm, with shortened drawers. Full drawer depth can be used from 70 cm.
Immersion depth 204 mm.
Ducting system for air extraction or air recirculation must be ordered separately as a special accessory.
Connection piece for air extraction: flat duct DN 150.
In air extraction a one-way flap with a maximum opening pressure of 65 Pa should be installed.
For optimum performance in air recirculation we recommend an outflow surface area of at least 720 cm².
Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended.
Appliance must be fixed from underneath.
Cooktop clamping range: 20 – 40 mm.
Appliance weight: approx. 31 kg.
The appliance must be freely accessible from below.
When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads.

Please read additional planning notes on page 248 – 249.

Connection

Total connected load 7.6 kW.
Connecting cable 1.2 m without plug.

Area for the air recirculation module or the duct.
Exact position depends on worktop depth.

Installation notes for induction cooktops and glass ceramic

Applies to CI 26./27./28./29., CX 492/482, VI 414/422/462/482/492 and VI 230/260/270.

Intake air ducting

Induction cooktops have a cooling fan to protect the appliance's electronics from overheating. In the case of insufficient air circulation in the cabinet, the appliance's output will be reduced to prevent electronic damage.

A Air duct behind a cabinet or built-in oven

An open cross-section of a minimum of 20 mm is needed across the full width and full height of the cabinet. Cabinets with a closed bottom also need a respective cross-section in the air duct area.

B Intake through the cabinet's back wall

In the cabinet's back wall, plan a recess of at least 45 mm in height from the worktop's bottom edge.

The minimum width is

- 300 mm for a 30 cm induction cooktop
- 350 mm for a 40 cm induction cooktop
- 550 mm for a Vario cooktop or a 60 cm to 80 cm induction cooktop
- 820 mm for a 90 cm induction cooktop

Intermediate shelf

To prevent the content of drawers underneath the cooktop from heating up, the use of an intermediate shelf is recommended for glass ceramic cooktops, except for cooktops with 90 cm width.

Width of cut-out at least

- 100 mm for a 60 to 80 cm induction cooktop

* does not apply to 90 cm cooktops

** min. 65 mm for cooktops with frame as well as VI 462/482/492 for surface mounting and min. 70 mm for cooktops without frame, for CX 480 with frame as well as for VI 462/482/492 for flush mounting.

Combination with other appliances

Installation above dishwasher or washing machine is not permitted.

Combination with AL 400

In addition to the measures mentioned above, the following unobstructed cross sections must be planned between the cabinet and the AL 400 to allow for proper intake and exhaust air circulation for the induction cooktop.

A In front of the air duct

20 mm distance between the back side of drawers, an oven or the cabinet's interior wall.

B Adjacent to the air duct

The resulting gap between the air duct and the cabinet's side wall needs to remain open.

C At the housing's rear edge

The resulting cross section between the housing and the wall, as well as between the housing and the floor, must remain open.

Vario ceiling ventilation 400 series AC 402

- Discreet integration into the architecture of the kitchen
- Flexible by dimension, performance and ventilation mode
- Room ventilation
- Modular ceiling ventilation which can be configured individually by separate components such as filter module, control modules and light module
- Motorless, can be combined with Gaggenau BLDC remote fan units
- Highly efficient patented rim extraction
- Planned and easy to clean underside with covered filters

Output

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

Rim extraction filter, dishwasher-safe.
Installation frame for thread rods (threaded rods included in delivery).
Connecting pipe DW 150 round.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 400 142.
Energy efficiency class B at a range of energy efficiency classes from A++ to E.
Energy consumption 52.5 kWh/year.
Energy consumption 52.5 kWh/year.
Ventilation efficiency class A.
Illumination efficiency class E.
Grease filter efficiency class B.
Sound level min. 50 dB / max. 65 dB normal mode.

Planning notes

The ceiling ventilation has to be handled as a room ventilation when distance to cooktop is larger than 120 cm since the direct capture of vapours will be limited. The needed airflow is given by an air exchange rate of 10 to 12 times the room volume. Please refer to page 200 – 201 for recommended configurations of ceiling ventilations and remote fan units and the resulting dimensions. Refer to the table on page 231 for the matching remote fan units for air recirculation or air extraction mode. For air recirculation an external filter module is required. Max. 3 filter modules to be connected to remote fan unit AR 400 142. When installing remote fan unit within the ceiling or furniture block it must remain accessible through the ceiling cutout or another maintenance access. Please ensure when installing the exhaust air ducting that no sharp bends are caused and that the cross-section of the ducting is not constricted in any way. When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the hood's power supply line needs a suitable safety switch.

Vario ceiling ventilation 400 series AC 482/AC 462

- Control module of ceiling ventilation with light
- Individual integration of light elements into the configuration of the ceiling ventilation

Output

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

7-key infrared remote control, backup keys for operation also on the control module.
3 electronically controlled power levels and 1 intensive mode.
Interval ventilation, 6 min.
Run-on function, 6 min.
Grease filter saturation indicator.

Planning notes

Connection to the respective appliances via network cable. When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch. Fixing at the filter module.

Connection

Total connected load 355 – 1160 W.
Connecting cable 1.75 m, pluggable.

Vario ceiling ventilation 400 series

AC 472

- Light module of ceiling ventilation
- Individual integration of light elements into the configuration of the ceiling ventilation

Features

Connection to the respective appliances via network cable.

Planning notes

Please refer to page 198 – 199 for recommended configurations of ceiling ventilations and remote fan units and the resulting dimensions.

Connection

Total connected load 50 W.

Connecting cable 1.75 m, pluggable.
Network cable 2 m.

Recommended configurations for ceiling ventilation 400 series

Planning as a cooktop ventilation wall/island (W/I) up to max. 120 cm distance to the cooktop.
For larger distances planning as room ventilation (R) with air exchange rates 10 to 12 times the room volume.

The given airflow of the remote fan units will be reduced by the different ducting types between filter modules and AR 400/401/403 as well as by the further ducting. For additional ducting chose the configuration with higher airflow.

Bold print: favoured configuration

Regular print: possible configuration

Other: – Not possible due to performance or ducting reasons

Respect the positioning of the remote fan units and the run of the ducts.

Table ventilation 400 series

AL 400

- Extendable table ventilation, when not in use can be completely lowered into the worktop
- Can be combined perfectly with other Vario appliances of the 400 series
- Dimmable, neutral white surface LED light for ideal illumination of the whole cooktop
- Precision crafting of 3 mm stainless steel
- For surface mounting with a visible edge or for flush mounting
- Motorless, can be combined with Gaggenau BLDC remote fan units

Output

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

3 electronically controlled power levels and 1 intensive mode.
Interval ventilation, 6 min.
Run-on function, 6 min.
Grease filter saturation indicator.
Cartridge-type filter, dishwasher-safe.
Neutral white surface LED light (3600 K), continuously dimmable.
Lamp output 4x5 W.
Illuminance 191 lx.
Spare covers for closing air outlets.
No connecting piece included.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 400 142.
Energy efficiency class A+/A at a range of energy efficiency classes from A++ to E.
Energy consumption 45.1/49 kWh/year.
Ventilation efficiency class A/A.
Illumination efficiency class E/E.
Grease filter efficiency class C/C.
Sound level min. 44/45 dB / max. 59/61 dB normal mode.

Planning notes

Refer to the table on page 231 for the matching remote fan units for air recirculation or air extraction mode.
Secure the control unit to the side panel of the cabinet, not to the base of the cabinet or the kitchen floor.
Connection to the respective appliances via network cable.
AL 400 121 (AL 400 191)
For operation with 4 (3) Vario 200 series cooktops, 3 (2) Vario 400 series cooktops or a cooktop configuration of up to 120 cm (92 cm) wide.
Operation of Vario cooking appliances only possible without appliance cover.
Max. output of cooktops 18 kW.
In combination with the cooktop CI 290, installation in 60 cm deep worktops is possible.
Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.

The remaining surface of the worktop (min. 50 mm) between the cut-outs must be reinforced with a support. It is recommended to use furniture support AA 409 401/431.

Ovens that do not exceed the maximum allowed cabinet temperature can be combined with the table ventilation if built-in situation permits.

To avoid smoke when frying/grilling refer to the manuals of VR/VP.

When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

Please read additional planning notes on page 202 – 204.

Recommended configurations for table ventilations 400 series and remote fan units 400 series

Good to know – for correct planning and installation

- The ducting can essentially be connected to the front, rear or below with the AL 400 table ventilation. The respective connecting pieces are available for this purpose.
- Plastic ducts can be used for installation behind a gas appliance. The maximum permitted performance of the cooktops is 18 kW.
- We recommend ducts with DN 150 for optimal air circulation.
- 2 flat ducts and 2 round ducts must be connected using a pipe connector.
- 2 bends (e.g. 90° horizontal with 90° vertical) require one flat duct pipe for connection, which can be shortened to the required length by cutting.
- It is equally important to ensure proper sealing of the ducting to avoid air leakages, for example with adhesive tape AD 990 090 (UV and heat resistant).
- If the AL 400 121 is installed in air recirculation mode and intensive cooking (e.g. Vario Teppan Yaki) is involved, we recommend to use a second remote fan unit AR 413 122 to support the vapour catch behaviour, see planning example 6.
- Vario cooktops with intensive vapour formation like Vario Teppan Yaki or Vario electric grill should be placed central in front of the ventilation appliance; in case of Vario electric grill air recirculation is not recommended.
- Secure the control unit to the side panel of the cabinet, not to the base of the cabinet or the kitchen floor.

Planning example 1

1 x AL 400 with AR 403 122 (air extraction) / AR 413 122 (air recirculation)

Connection to the front with flat duct or aluflex pipe, DN 150; cabinet installation

Combination

1 x AL 400 table ventilation combined with 1 x AR 403 122 / AR 413 122 remote fan unit

Good to know

- The air collector box can be screwed directly to the remote fan unit. The reducing piece supplied is not needed in this case.
- For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 700 cm² for each remote fan unit).

List of accessories 1

Connection to the front with flat or aluflex pipe, DN 150; cabinet installation

Combination

1 x AL 400 table ventilation combined with 1 x AR 400 142 remote fan unit

Good to know

- The remote fan unit can be connected alternately to the front or rear.
- Depending on the ducting type selected, connecting pieces are available for flat ducts or round ducts.
- A round duct or aluflex pipe is required additionally in configuration 1 depending on the cabinet height.

List of accessories 1

- 1 x AD 854 045 (connecting pieces for flat duct, 2 x DN 150)
- 2 x AD 852 042 (flat duct transition round 90°)

Planning example 3

1 x AL 400 with AR 403 122 (air extraction) / AR 413 122 (air recirculation)

Connection downward with flex duct, DN 150, cabinet installation

Combination

1 AL 400 table ventilation combined with 1 x AR 403 122 / AR 413 122 remote fan unit

Good to know

- The air collector box can be screwed directly on the remote fan unit. The reducing piece supplied is not needed in this case.
- For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 700 cm² for each remote fan unit).

List of accessories 1

- 1 x AD 854 043 (connecting pieces for flat duct downward, 2 x DN 150)
- 1 x AD 704 049 (air collector box for AL 400)

Planning example 4

1 x AL 400 with AR 400 142

Connection downward with flat and round duct, DN 150; cellar installation

Combination

1 x AL 400 table ventilation combined with 1 x AR 400 142 remote fan unit

Good to know

- The AR 400 142 remote fan unit can also be installed in an adjoining room, for example a cellar, as an alternative to cabinet installation
- Suitable threaded rods or suspension elements must be used for this configuration on the customer side; these can be attached to the retaining brackets, which are included ex works with the remote fan unit.

List of accessories 1

- 1 x AD 854 043 (connecting pieces for flat duct downward, 2 x DN 150)
- 2 x AD 852 041 (flat duct transition round)
- 2 x AD 751 010 (aluflex pipe round, DN 150)

Recommended configurations for table ventilations 400 series and remote fan units 400 series

Planning example 5

1 x AL 400 with AR 401 142

Connection downward with flat and round duct, DN 150; installation on outside wall

Combination

1 x AL 400 table ventilation combined with 1 x AR 401 142 remote fan unit

Good to know

- The AR 401 142 remote fan unit for installation on the outside wall is the ideal solution for compact air extraction.
- The ducting can be directed to outside via the cellar in this case. A minimum distance must simply be maintained for the air exhaust downwards on the AR 401 142 (100 cm). Distance ground to central line of the pipe: 60 cm.
- Local building regulations must be observed for the cellar breakout (especially with respect to the topic of fire safety).
- The ducting can of course also be implemented in the plinth area of the kitchen cabinets.

List of accessories 1

- 1 x AD 854 043 (connecting pieces for flat duct downwards, 2 x DN 150)
- 2 x AD 852 041 (flat duct transition round 90°)
- 2 x AD 751 010 (aluflex pipe round, DN 150); possibly additional ducts depending on the exhaust air ducting (aluflex or Naber round duct, DN 150)
- 1 x AD 704 048 (air collector box for AL 400)
- 1 x AD 702 052 (telescopic wall duct, DN 200)

Connection to the front with flat duct

Combination

1 AL 400 121 table ventilation combined with 2 x AR 413 122 remote fan unit

Good to know

- If the AL 400 121 is installed in air recirculation mode and intensive cooking (e.g. Vario Teppan Yaki) is involved, we recommend to use a second remote fan unit AR 413 122 to support the vapour catch behaviour

List of accessories 1

Installation accessories for the air recirculation ducts you will find at the pages 264 – 277.

Vario downdraft ventilation 400 series VL 414

- Highly efficient ventilation system at the cooktop
- Flexible power distribution, precise extraction of cooking vapours only at the open ventilation elements
- Can be combined perfectly with other Vario appliances of the 400 series
- Precision crafting of 3 mm stainless steel
- For surface mounting with a visible edge or for flush mounting
- Motorless, can be combined with Gaggenau BLDC remote fan units

Output

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

Manual opening of the ventilation element.
Closing element made of stainless steel, dishwasher-safe.
Metal grease filter, dishwasher-safe.
No connecting piece included.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 403 122.
Energy efficiency class A+ at a range of energy efficiency classes from A++ to E.
Energy consumption 42.7 kWh/year.
Ventilation efficiency class A.
Illumination efficiency class -.
Grease filter efficiency class C.
Sound level min. 56 dB / max. 68 dB normal mode.

Planning notes

Refer to the table on page 231 for the matching remote fan units for air recirculation or air extraction mode.
Secure the control unit to the side panel of the cabinet, not to the base of the cabinet or the kitchen floor.
For each VL one remote fan unit is recommended.
Maximum cooktop width between two VL: 60 cm.
Appliance can be snapped into the worktop from above. Additional fixing by clamps accessible from bottom up, clamping range 30-50 mm.
If installing with the appliance cover VA 440 or filler strip VA 450 take into account the additional space required for the depth.
If combining several appliances with at least one appliance cover, the filler strip VA 450 is required to compensate for the depth of the appliance without the appliance cover.
If combining several Vario appliances of the 400 series, a connection strip VA 420 must be placed between the appliances. Depending on the type of installation, the corresponding connection strip must be provided.
In the cut-out, the installation system requires the side edge to be at least 10 mm for surface mounting and at least 13 mm for flush mounting. Ensure a continuous cut surface of 90°.
The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures.

Take into account the appliance weight and additional loads.

Additional instructions for flush mounting:

Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.

The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining.

The joint width may vary due to size tolerances of the combinations and of the worktop cut-out.

If installing several appliances in individual cut-outs allow for a division bar of minimum 50 mm between the individual cut-outs.

If operated next to gas appliances, the ventilation moulding AA 414 010 is recommended to ensure maximum performance of the cooktop.

If installed next to gas appliances, flat ducts must not be used for the piping up to the fan unit.

If installed next to VP 414, the flat duct must not be positioned underneath the VP 414.

Please read the installation details regarding air ducting on page 118 – 123.

Please read additional planning notes on page 210 – 213.

Vario control knob ventilation 400 series AA 490

- Solid stainless steel control knob
- Can be combined perfectly with other Vario appliances of the 400 series
- Motorless, can be combined with Gaggenau BLDC remote fan units

Handling

Control knob with illuminated ring and output marking.

Features

3 electronically controlled power levels and 1 intensive mode.
Run-on function, 6 min.

Planning notes

The separate electronics housing is to be installed so that it is accessible. Secure the control unit to the side panel of the cabinet, not to the base of the cabinet or the kitchen floor. When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

Connection

Total connected load 10 W.
Connecting cable 1.8 m, pluggable.

Recommended configurations of the Vario downdraft ventilation 400 series and remote fan units 400 series

Good to know – for correct planning and installation

- For depth measurements, take account of the depth of the furniture cavity and worktop overhangs of the kitchen furniture.
- With the Vario downdraft ventilation, the ducting can be connected on the right, left or downwards.
- If the system is installed next to a gas appliance, ducts made of plastic (e.g. the flat duct system) must not be used, because of heat generation. In such cases, we recommend the use of aluflex pipes of the downdraft ventilation, directed downwards (accessory AD 724 042).
- Please note that flat ducts cannot be installed on the right or left of the following appliances due to their depth: Vario Teppan Yaki, Vario electric grill, Vario deep fryer, Vario steamer. For these, we recommend connection either to the other side or in a downward direction.
- For optimum air circulation, we recommend ducts with DN 150.
- 2 flat or 2 round ducts must be connected with a pipe connector.
- To connect 2 duct bends together (e.g. a 90° horizontal duct bend and a 90° vertical duct bend), a piece of flat duct is required, which can be shortened to the required length by cutting it to size.
- It is also important that ducting is well sealed in order to prevent air leaks, e.g. by using the adhesive tape AD 990 090 (UV- and heat-resistant).
- Vario cooktops with intensive vapour formation like Vario Teppan Yaki or Vario electric grill should be placed centrally in the cooktop configuration. In case of Vario electric grill air recirculation is not recommended.
- Secure the control unit to the side panel of the cabinet, not to the base of the cabinet or the kitchen floor.

Planning example 1

Flat duct with 2 x 90° duct bends or flat duct with 1 x 90° duct bend

Combination

1 x downdraft ventilation VL 414 in combination with 1 x AR 400 142 remote fan unit

Good to know

Connecting to the AR 400 remote fan unit is possible at all four air intakes.

List of accessories 1

- 1 x AD 854 046 (connecting piece for VL 414, DN 150)
- 1 x AD 852 031 (flat duct with horizontal 90° duct bend)

Planning example 2**1 x VL 414 with AR 413 122**

Flat duct with 2 x 90° duct bends or flat duct with 1 x 90° duct bend

Combination

1 x downdraft ventilation in combination with 1 x AR 413 122 remote fan unit.

Good to know

- The remote fan unit can be turned in all directions, depending on the desired direction for the exhaust air or filter removal.
- For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 700 cm²). For this, we recommend the air exhaust grille AA 010 410.
- The connecting piece DN 150 is included with the remote fan unit.
- The recommended minimum distance between filter openings and cupboard wall if there is no ventilation grille directly in front: 15 cm.

Planning example 4

1 x VL with AR 410 110

Flat duct with 2 x 90° bends

Combination

1 x downdraft ventilation in combination with 1 x AR 410 110 remote fan unit

Good to know

The charcoal filter exchange is possible from both sides.
Allow accessibility to the charcoal filters in the lower cabinet for replacing the filter.
It is possible to position the remote fan unit direct on the floor or fix it with the retaining brackets with a cut-out in the furniture base.
For configuration 2 is depending on the depth of the island a second flat duct AD 852 010 needed.
For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 700 cm²).

Installation accessories for the air recirculation ducts you will find at the pages 264 – 277.

Flex induction cooktop with downdraft ventilation 400 series CVL 410

- For flush mounting
- Flex function for combining the rectangular cooking areas
- Free positioning of cookware inside combined cooking areas
- Large cooking zone for pots up to ø32 cm
- Ideal for the original wok pan with round bottom, with wok ring
- Solid stainless steel control knob
- Easy control of cooktop functions with bicoloured display
- Highly efficient ventilation system at the cooktop
- Motorless, can be combined with Gaggenau BLDC remote fan units
- Air extraction or air recirculation system

Cooking zones

2 flex induction cooking areas
19x24 cm (2200 W, with booster 3700 W), linked together 38x24 cm (3300 W, with booster 3700 W).
1 induction cooking zone ø21 cm (2200 W, with booster 3700 W), automatically switches to ø26 cm (2600 W, with booster 3700 W) and to ø32 cm (3300 W, with booster 3700 W).

Performance of ventilation system

Power levels depend on the remote fan unit, see table on page 286 – 287.

Handling

Control knobs with illuminated ring, cooking zone and output level markings.
Electronic power control of the cooking zone in 12 output levels.
User friendly control of cooktop functions with bicoloured display (white / orange).
Control of ventilation system with 3 electronically controlled power levels and 1 intensive mode.

Features

Flex function for rectangular cooking areas.
32 cm cooking zone.
Wok function.
Frying sensor function.
Booster function.
Stopwatch.
Short-term timer.
Options menu.
Run-on function, 6 min.
Manual opening of the ventilation element.
Closing element made of stainless steel, dishwasher-safe.
Metal grease filter, dishwasher-safe.

Consumption data of downdraft ventilation

Consumption data is referred to a configuration with the remote fan unit AR 403 122.
Energy efficiency class A+ at a range of energy efficiency classes from A++ to E.
Energy consumption 42.7 kWh/year.
Ventilation efficiency class A.
Illumination efficiency class -.
Grease filter efficiency class C.
Sound level min. 56 dB / max. 68 dB normal mode.

Safety

Operation indicator.
Pot detection.
Individual residual heat indicators.
Safety shut-off.

Planning notes

Refer to the table on page 231 for the matching remote fan units for air recirculation or air extraction mode.
When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.
The horizontal positioning of the knobs may be aligned with the specific cooking areas and downdraft ventilation.
The drawing "Installation of the control knob" must be observed if the panel is more than 23 mm thick (there must be a recess at the rear).
In the cut-out, the installation system requires the side edge to be at least 13 mm for flush mounting. Ensure a continuous cut surface of 90°.
The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.
The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining.
Joint width may vary due to dimensional tolerances of the glass ceramic cooktop and the worktop cut-out.
Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended.
Immersion depth 174 mm.
Appliance can be snapped into the worktop from above.

Please read the installation details regarding air ducting on page 218 – 219.

Connection

Total connected load 7.41 kW
(2 x 3.7 kW cooktops and 0.01 kW control knob ventilation)
Connecting cable cooktops 1.5 m without plug.
Connecting cable downdraft ventilation 1.8 m, pluggable.
Connection cable 2.0 m between ventilation element VL 410 and control knob AA 490.

Planning examples for the flex induction cooktop with downdraft ventilation 400 series

Good to know – for correct planning and installation

- For depth measurements, take account of the depth of the furniture cavity and worktop overhangs of the kitchen furniture.
- With the Vario downdraft ventilation, the ducting can be connected on the right, left or downwards
- For optimum air circulation, we recommend ducts with DN 150.
- 2 flat or 2 round ducts must be connected with a pipe connector.
- To connect 2 duct bends together (e.g. a 90° horizontal duct bend and a 90° vertical duct bend), a piece of flat duct is required, which can be shortened to the required length by cutting it to size.
- It is also important that ducting is well sealed in order to prevent air leaks, e.g. by using the adhesive tape for sealing the ducts AD 990 090 (UV- and heat-resistant).
- The flex induction cooktop with downdraft ventilation is not part of the SET.
- For further planning examples for the flex induction cooktop with downdraft ventilation refer to the planning examples of VL 414 (page 210 – 213).
- Secure the control unit to the side panel of the cabinet, not to the base of the cabinet or the kitchen floor.

Planning example 1 (air extraction)

Configuration for CVL 410/420 with AR 403 122 (air extraction), min. 60 cm worktop depth

Combination

Flex induction cooktop with downdraft ventilation in combination with AR 403 122 remote fan unit (air extraction).

Good to know

- Full drawers can be installed beneath the flex induction cooktop with downdraft ventilation 400 series.
- The connection piece DN 150 is included with the remote fan unit.

List of components

- 1 x AR 403 122 (remote fan unit plinth 400 series)
- 1 x AD 854 046 (connection piece for VL, 150)
- 2 x AD 852 040 (flat duct connecting piece 150)

Planning example 2 (air extraction)

Configuration for CVL 410/420 with AR 403 122 (air extraction), min. 71cm worktop depth

Combination

Flex induction cooktop with downdraft ventilation in combination with AR 403 122 remote fan unit (air extraction).

Good to know

- Short drawers can be installed beneath the flex induction cooktop with downdraft ventilation 400 series.
- The connection piece DN 150 is included with the remote fan unit.

List of components

- 1 x AR 403 122 (remote fan unit plinth 400 series)
- 1 x AD 854 046 (connection piece for VL, 150)

min. 68 cm worktop depth

Combination

Flex induction cooktop with downdraft ventilation in combination with AR 413 122 remote fan unit (air recirculation).

Good to know

- Short drawers can be installed beneath the flex induction cooktop with downdraft ventilation 400 series.
- For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 700 cm²).
- Installation w/o ventilation grille possible. The recommended minimum distance between filter openings and cupboard wall if there is no ventilation grille directly in front: 15 cm.
- Filter can be changed from front.
- The connection piece DN 150 is included with the remote fan unit.

List of components

- 1 x AR 413 122 (remote fan unit plinth 400 series)

- Professional technology hood combined with classic Gaggenau design
- Highly efficient extraction of cooking vapours due to large vapour collection area
- Motorless, can be combined with Gaggenau BLDC remote fan units
- Angled baffle filter with high grease absorption
- Function for automatic, sensor-controlled power adjustment depending on the build-up of cooking vapours
- Dimmable, neutral white surface LED light for ideal illumination of the whole cooktop
- Air extraction or air recirculation system
- Air recirculation module with activated charcoal filter: quiet and highly efficient air recirculation solution with odour reduction as in air extraction mode and long replacement intervals

Output

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

3 electronically controlled power levels and 1 intensive mode.
Automatic function with sensor-controlled run-on function.
Grease filter saturation indicator.
Baffle filter, dishwasher-safe.
Neutral white surface LED light (3500 K), continuously dimmable.
Lamp output 4 x 10 W.
Illuminance 1390 lx.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 400 143.
Energy efficiency class A/A/A at a range of energy efficiency classes from A++ to E.
Energy consumption 49.1/49.5/51.3 kWh/year.
Ventilation efficiency class A/A/A.
Illumination efficiency class A/A/A.
Grease filter efficiency class B/B/B.
Sound level min. 45/44/44 dB / max. 62/62/61 dB normal mode.

Planning notes

Refer to the table on page 231 for the matching remote fan units for air recirculation or air extraction mode.
The two-part chimney including the mounting kit must be ordered as an installation accessory.
Connection to the respective appliances via network cable.
Clearance above gas appliances min. 70 cm.
Clearance above electric appliances min. 60 cm.
Air recirculation module with 2 activated charcoal filters is installed in the inner chimney. Special air recirculation chimneys are available for this.
When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

Wall-mounted hood 400 series**AW 442**

- Professional technology hood combined with classic Gaggenau design
- Highly efficient extraction of cooking vapours due to large vapour collection area
- Motorless, can be combined with Gaggenau BLDC remote fan units
- Angled baffle filter with high grease absorption
- Function for automatic, sensor-controlled power adjustment depending on the build-up of cooking vapours
- Dimmable, neutral white surface LED light for ideal illumination of the whole cooktop
- Air extraction or air recirculation system
- Air recirculation module with activated charcoal filter: quiet and highly efficient air recirculation solution with odour reduction as in air extraction mode and long replacement intervals

Output

Power levels depend on the remote fan unit, see table on page 286 – 287.

Features

3 electronically controlled power levels and 1 intensive mode.
Automatic function with sensor controlled run-on function.
Grease filter saturation indicator.
Baffle filter, dishwasher-safe.
Neutral white surface LED light (3500 K), continuously dimmable.
Lamp output 4 x 10 W.
Illuminance 1010 lx.
Easy mounting system for simple installation and alignment.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 400 143.
Energy efficiency class A/A/A+ at a range of energy efficiency classes from A++ to E.
Energy consumption 49.8/43.3/41.6 kWh/year.

Good to know

- The AR 400 143 remote fan unit is ideal for space-saving installation for assembly in the AI 442.
- Two chimney lengths are available depending on the height of the room.
- The minimum distance to the cooktop is 600 mm, and 700 mm for gas appliances.
- The necessary mounting kits are included as accessories with the chimney.
- The appropriate installation accessories are available for air extraction and air recirculation, see the list of accessories.
- The minimum height of AI 442 is increased by 2 cm with the installation of the ceiling collar.

List of accessories 1 (air extraction)

- 1 x AR 400 143 (remote fan unit for AI 442 / AW 442 chimney installation)
- 1 x AD 442 016 (stainless steel chimney for air extraction for room height of 2.35 m to 2.60 m)
- or 1 x AD 442 026 (stainless steel chimney for air extraction for room height of 2.60 m to 3.10 m)
- 1–2 x AD 752 010 (round duct, DN 150), depending on room height
- 1 x AD 990 090 (adhesive tape for bonding the ducts)
- Optional : 1 x AD 442 396 (stainless steel ceiling collar for island hood)

General planning notes

The aim of good ventilation system planning is to extract cooking vapours out of the kitchen area as completely and quickly as possible. To help you plan and install your system correctly, here are a few important notes on system planning from our ventilation experts.

The planning of a ventilation system is significantly determined by the air requirement and air output. The air requirement must be contrasted with the corresponding air output that a ventilation appliance can produce, while taking account of the influence of all the ventilation components involved.

Air requirement needed:

The air output of a complete ventilation system must be designed according to the air requirement needed. For this, the size of the kitchen and a corresponding air change rate for the volume of space are often used as the basis for planning. We recommend this method only if the distance between the ventilation system and the cooktop is greater than 1.20 m, that is to say, for ceiling ventilation.

- For air extraction operation, the air requirement for the air exchange rate is calculated using a factor of 10.
- However, the calculation is made using a factor of 12 in kitchens where special cooking appliances such as the grill, Teppan Yaki, wok or deep fryer are used.
- For air recirculation, the air requirement for the air exchange rate is generally calculated using a factor of 12.

If the distance between the ventilation system and the cooktop is less than 1.20 metres, the factors listed below must be taken into account to ensure that most of the cooking vapours are trapped as soon as they rise from the cooktop:

- **The size and architecture of the kitchen:** As the size of the room increases, the movements of air in the room also increase and, as a result, the air requirement becomes greater.
- **The cooking appliances:** The choice of cooktop is the decisive influencing factor. Every cooktop produces different types and amounts of cooking vapours. The wider the cooktop, the higher the output of the ventilation system should be. Above all, the ventilation system must have a sufficient reserve capacity, if special Vario cooking appliances, such as a fryer, Teppan Yaki, wok or grill, are to be installed, because such appliances can be expected to produce a higher amount of cooking vapours. We therefore also recommend that these special cooking appliances are installed, if possible, in the centre of the cooktop configuration and not at the edge.
- **The type of ventilation system:** Every type of ventilation system has particular characteristics which influence the air requirement needed. Ventilation systems, such as downdraft ventilation and table ventilation, are characterised by extracting vapours directly from the cooktop. As they rise up, the cooking vapours can therefore not spread as far in the ambient air. In this case, the air output required is usually less than for those types of ventilation system that are 80 cm or further away from the cooktop.
- **The operation mode:** All Gaggenau ventilation systems can be operated both in exhaust air mode and air recirculation mode. It should be noted that, in air recirculation mode, the additional activated charcoal air filter leads to a reduction in air output in comparison to exhaust air mode. The larger the surface of the activated charcoal air filter, the more the ventilation system bears comparison in its extraction and noise behaviour with an exhaust air solution. In air extraction mode, the actual air output depends not only on the fan output, but also significantly on the duct system.

Important influencing factors on the air output:

- The fans: Gaggenau ventilation systems are equipped with particularly powerful fans, or they can be combined with correspondingly powerful remote fan units for exhaust air or air recirculation mode. These fans are also very pressure-stable. They overcome possible pressure losses caused by a ducting system and work highly effectively at a low noise level.
- Ducting and installation: To achieve optimum results, the following points should be observed during installation:
 1. Install duct bends with a minimum clearance of 30 cm from the exhaust air opening.
 2. Avoid reductions in cross sections.
 3. For duct bends, use bends that are as wide as possible.
 4. Only install ducts that have a smooth and flat inner surface.
 5. Use exhaust air pipes with a diameter of at least 125 mm.
 6. Pay attention to the use of a short ducting paths as possible.
 7. Fit wall outlets that have wide fins, wide-meshed grilles and a low back-pressure.
 8. Ensure sufficient supply air.

You are welcome to check whether your exhaust air ducting has the required air requirement by using our Rodun calculation tool on our website (www.gaggenau.com).

The external remote fan units of the 400 series have a network cable that is used to connect the motorless appliances of the 400 series.

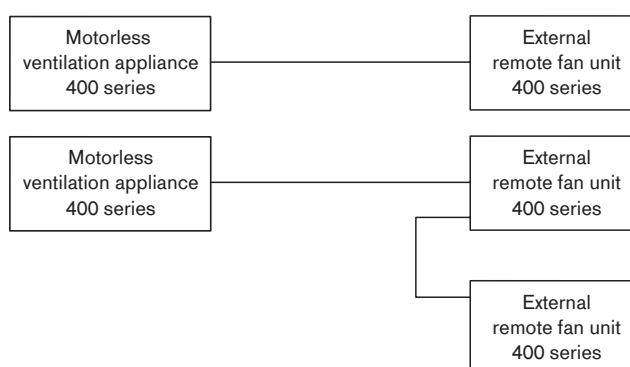

Up to two remote fan units can be connected (e.g. with ceiling ventilation), whereby an additional network cable is connected from one remote fan unit to the other remote fan unit.

Other control options

It is possible on request to connect the signal via a zero potential contact to a ventilation appliance at the site so that this appliance can respond accordingly to activity on the part of Gaggenau's 400 series ventilation appliances.

The respective ventilation planner is then responsible for the effective operation of the entire ventilation system.

The guarantee of electrical function is maintained as long as the respective specifications are observed.

Features

3 electronically controlled power levels
and 1 intensive mode.

Remote control is included in delivery.

Interval ventilation, 10 min.

Run-on function, 10 min

Grease filter saturation indicator.

Metal grease filter, dishwasher-safe.

Stainless steel filter cover.

Neutral white LED light (4000 K),
dimable.

Lamp output 4x2.5 W.

Illuminance 673 lx.

Fan technology with highly efficient,
brushless DC motor (BLDC).

Turnable blower, air outlet on all four
sides possible.

Connecting pipe DW 150 round.

Consumption data

Energy efficiency class A at a range of
energy efficiency classes from
A++ to E.

Energy consumption 58.2 kWh/year.

Ventilation efficiency class A.

Illumination efficiency class A.

Grease filter efficiency class E.

Sound level min. 49 dB / max. 64 dB
normal mode.

Planning notes

For installation in suspended ceiling.

A suitable load-bearing substructure is
required for securing the extractor
hood. Never fit the appliance directly

onto plasterboard or similar lightweight
construction materials.

Recommended minimum gap between
appliance and external filter
module: 100 cm.

For air recirculation an external filter
module is required.

Clearance above gas appliances min.

65 cm (more than total load gas 12 kW
min. 70 cm).

Clearance above electric appliances
min. 55 cm.

Maximum clearance above cooktops
150 cm.

The capture of vapours will be
inefficient if the ceiling ventilation is
positioned too high.

The cooktop should be no wider than
the ceiling ventilation.

To achieve optimum vapour extraction,
the ceiling ventilation must at least
cover the hob. It should be positioned
centrally over the hob. It cannot be
combined with VR, VP.

Please ensure when installing the
exhaust air ducting that no sharp
bends are caused and that the
cross-section of the ducting is not
constricted in any way.

When installing a ventilation hood with
air extraction mode and a chimney-
vented fireplace, the power supply line
of the ventilation appliance needs a
suitable safety switch.

Appliance weight: approx. 15 kg.

Connection

Total connected load 285 W.

Connecting cable 1.3 m with plug.

Vario downdraft ventilation 200 series

VL 200

- Can be combined with the cooktops of the Vario 200 series to a harmonic unity
- Highly efficient ventilation system at the cooktop integrated in the worktop
- Function for automatic, sensor-controlled power adjustment depending on the build-up of cooking vapours
- Minimal planning and easy installation
- Low-noise system with the motor AR 410 110
- Air extraction or air recirculation system

Output

Performance and noise level, output level 3/Intensive:

Air output according to EN 61591.

Sound power level according to EN 60704-3.

Sound pressure level according to EN 60704-2-13.

Odour reduction for air recirculation in accordance with EN 61591.

Configuration with the remote fan unit AR 410 110: air recirculation
453 / 565 m³/h.

68 / 73 dB (A) re 1 pW.

53 / 58 dB (A) re 20 µPa.

Odour reduction 90% with activated charcoal filter / 86% with regenerable activated charcoal filter

Configuration with the remote fan unit AR 413 122: air recirculation
496 / 642 m³/h.

72 / 79 dB (A) re 1 pW.

57 / 63 dB (A) re 20 µPa.

Odour reduction 87% with activated charcoal filter.

Configuration with the remote fan unit AR 403 122: air extraction
581 / 723 m³/h.

73 / 78 dB (A) re 1 pW.

58 / 63 dB (A) re 20 µPa.

Power levels depend on the remote fan unit, see table on page 286 – 287.

Consumption data

Consumption data is referred to a configuration with the remote fan unit AR 403 122.

Energy efficiency class A+ at a range of energy efficiency classes from A++ to E.

Energy consumption 39.7 kWh/year.

Ventilation efficiency class A.

Illumination efficiency class -.

Grease filter efficiency class B.

Sound level min. 58 dB / max. 73 dB normal mode.

Planning notes

Air recirculation mode in combination with remote fan unit with AR 410 110 or AR 413 122.

Air extraction in combination with remote fan unit AR 403 122.

Please refer to page 236 – 238 for recommended configurations of downdraft ventilations and remote fan units and the needed ducting elements.

Maximum cooktop width between 2 VL: 60 cm.

If installed next to gas appliances, the ventilation moulding LS 041 001 is recommended to ensure maximum performance of the cooktop.

When having installed the ventilation moulding LS 041 001 the wok pan WP 400 001 can not be used.

When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

Please read additional planning notes on page 131.

Connection

Connecting cable 1.7m between VL and remote fan unit.

AD 410 040: Flexibel connecting piece for VL 200, DN 150 flat

AD 851 041: Connecting piece VL 200 for extension with flat duct DN 150 for extra deep worktop

Planning examples with the downdraft ventilation 200 series

Good to know – for correct planning and installation

- For depth measurements, take account of the depth of the furniture cavity and worktop overhangs of the kitchen furniture.
- With the Vario downdraft ventilation, the ducting can be connected to below or to the rear (in option). The respective connecting pieces are available for this purpose.
- Maximum distance between the Vario downdraft ventilation and the remote fan unit: Cable length in between 1,7 m
- For optimum air circulation, we recommend ducts with DN 150.
- 2 flat or 2 round ducts must be connected with a pipe connector.
- To connect 2 duct bends together (e.g. a 90° horizontal duct bend and a 90° vertical duct bend), a piece of flat duct is required, which can be shortened to the required length by cutting it to size.
- It is also important that ducting is well sealed in order to prevent air leaks, e.g. by using the adhesive tape AD 990 090 (UV- and heat-resistant).
- Vario cooktops with intensive vapour formation like Vario Teppan Yaki, Vario electric grill should be placed central; in case of Vario electric grill air recirculation is not recommended.

AD 851 041: Connecting piece VL 200 for extension with flat duct DN 150 for extra deep worktop

Planning example 1 (air recirculation)**VL 200 with AR 410 110 remote fan unit**

Wall installation, worktop depth 65 cm, access to the filters for replacement from the front.

Good to know

- Allow accessibility to the charcoal filters in the lower cabinet for their replacement.
- Additionally, if the plinth is higher than 80 mm, the external remote fan unit has to be elevated to enable access to the filters. If the plinth is 80 mm high, the remote fan unit can be placed directly on the floor.
- For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 700 cm²).

List of components

- 1 x AR 410 110 (remote fan unit air recirculation)
- 1 x AD 410 040 (flexibel connecting piece for VL 200, DN 150 flat)

Planning example 3 (air recirculation)

VL 200 with AR 413 122 remote fan unit

Island installation, access to the filter for replacement from the front.

Good to know

- The remote fan unit can be turned in all directions, depending on the desired direction for the exhaust air or filter removal.
- Allow accessibility to the charcoal filters in the lower cabinet for their replacement.
- The recommended minimum distance between filter openings and cupboard wall if there is no ventilation grille directly in front: 15 cm.
- For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 700 cm²).
- The connection piece DN 150 is included with the remote fan unit.

List of components wall installation

- 1 x AR 413 122 (remote fan unit plinth)

- Particularly quiet due to patented noise insulation

Output

Performance output level 3/Intensive:
Air output according to EN 61591.
Sound power and sound pressure depending on built-in situation.
Air recirculation:
575 / 665 m³/h.
Power levels depend on the motorless appliances, see table on page 286 – 287.

Features

3 electronically controlled power levels and 1 intensive mode.
Fan technology with highly efficient, brushless DC motor (BLDC).
Including sound insulation to minimise the noise level.
Steel housing, zinc-plated.
Pipe connection piece on intake side:
1 x NW 150 flat duct.
Retaining bracket for installation at the furniture base enclosed.
2 activated charcoal filters enclosed ex factory.
Filter is suitable for the preparation of fish and seafood due to special treatment.
Filter replacement interval: 1 year depending on cooking frequency.

Planning notes

Powerful remote fan unit to combine with Vario downdraft ventilation 400 series and 200 series.
Connection to the respective appliances via network cable.
Installation in a cupboard possible with a cut-out in the furniture base or behind the cupboard.
Please refer to the planning information on page 204 – 206.
To replace the filter the remote fan unit must be accessible.
The charcoal filter exchange is possible from both sides.

Planning notes

Bottom cabinet width: min. 80 cm.
Worktop depth: min. 60 cm, with shortened drawers. Full drawer depth can be used from 70 cm.
Immersion depth 205 mm.
Ducting system for air extraction or air recirculation must be ordered separately as a special accessory.
Connection piece for air extraction: flat duct DN 150.
In air extraction a one-way flap with a maximum opening pressure of 65 Pa should be installed.
For optimum performance in air recirculation we recommend an outflow surface area of at least 720 cm².
Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended.
Appliance must be fixed from underneath.
Cooktop clamping range: 20 – 40 mm.
Appliance weight: approx. 30 kg.
The appliance must be freely accessible from below.
When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.
The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining. Joint width may vary due to dimensional tolerances of the glass ceramic cooktop and the worktop cut-out.

Please read additional planning notes on page 248 – 249.

Connection

Total connected load 7.6 kW.
Connecting cable 1.2 m without plug.

Planning notes

Bottom cabinet width: min. 80 cm.

Worktop depth: min. 60 cm, with shortened drawers. Full drawer depth can be used from 70 cm.

Immersion depth 204 mm.

Ducting system for air extraction or air recirculation must be ordered separately as a special accessory.

Connection piece for air extraction: flat duct DN 150.

In air extraction a one-way flap with a maximum opening pressure of 65 Pa should be installed.

For optimum performance in air recirculation we recommend an outflow surface area of at least 720 cm².

Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended. Appliance must be fixed from underneath.

Cooktop clamping range: 20 – 40 mm.

Appliance weight: approx. 31 kg.

The appliance must be freely accessible from below.

When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads.

Please read additional planning notes on page 248 – 249.

Connection

Total connected load 7.6 kW.

Connecting cable 1.2 m without plug.

Area for the air recirculation module or the duct.
Exact position depends on worktop depth.

Planning examples for flex induction cooktop with integrated ventilation system 200 series

Good to know – for correct planning and installation

- For depth measurements, take account of the depth of the furniture cavity and worktop overhangs of the kitchen furniture.
- The air extraction ducting can be connected to below or to the rear. The respective connecting pieces are available for this purpose.
- The appliance must be accessible from underneath.

Air recirculation

- Installation with the air recirculation module CA 282 811 (available as a special accessory).
- Filters can be replaced from the front or rear. Accessibility needs to be determined during installation already.
- Allow accessibility to air recirculation module in the lower cabinet for replacing the filter.
- For optimum performance, the recirculated air requires sufficient space to escape (outflow surface area of at least 720 cm²).
Connection piece for air extraction: flat duct DN 150.
- The recommended minimum distance between filter openings and cupboard wall if there is no ventilation grille directly in front: 20 cm.

Planning example 1

access to the filter for replacement from the front.

Planning example 2

Island installation, worktop depth 92 cm,
access to the filter for replacement from the rear.

Air extraction

- Installation with the flat duct connecting piece CA 284 011 (available as a special accessory).
- Maximum length of the air extraction ducting system 6 m to assure good performance.
- For optimum air circulation, we recommend ducts with DN 150. Ducting and connection pieces are available as special accessories.
- Two flat ducts must be connected with a pipe connector.
- It is also important that ducting is well sealed in order to prevent air leaks, e.g. by using the adhesive tape AD 990 090 (UV- and heat-resistant).

Flat kitchen hood 200 series

AF 200

- Unobtrusive flat kitchen hood design thanks to integrated glass panel in the steam screen
- Especially quiet operation thanks to integrated sound insulation
- A special mechanism extends the steam screen automatically
- Steam screen and visible corpus made of brushed stainless steel
- Integration of a spice rack is possible
- Energy-saving, low-noise fan
- Function for automatic, sensor-controlled power adjustment depending on the build-up of cooking vapours
- Dimmable, neutral white LED light for ideal illumination of the whole cooktop
- The patented lowering frame allows the flat kitchen hood to disappear completely into the upper cabinet
- Air extraction or air recirculation system
- Air recirculation module with activated charcoal filter: quiet and highly efficient air recirculation solution with odour reduction as in air extraction mode and long replacement intervals

Output

Performance and noise level, output level 3/Intensive:

Air output according to EN 61591.

Sound power level according to EN 60704-3.

Sound pressure level according to EN 60704-2-13.

Odour reduction for air recirculation in accordance with EN 61591.

Air extraction:

380 / 690 m³/h.

54 / 66 dB (A) re 1 pW.

50 / 54 dB (A) re 20 µPa.

Air recirculation:

380 / 660 m³/h.

57 / 69 dB (A) re 1 pW.

43 / 55 dB (A) re 20 µPa.

Odour reduction air recirculation 94%.

Features

Controls at front.

3 electronically controlled power levels and 1 intensive mode.

Automatic function with sensor-controlled run-on function.

Grease filter saturation indicator.

Stainless steel grease filter, dishwasher-safe.

Neutral white LED light (3500 K), continuously dimmable.

Lamp output 2x3 W.

Illuminance 683 lx.

Light can be switched on separately.

Fan technology with highly efficient, brushless DC motor (BLDC).

Integrated sound insulation for quiet operation.

The fan is activated when the steam screen is extended.

Patented technology for extension of the steam screen.

Extendable steam screen 198 mm.

Airflow-optimised interior for efficient air circulation and ease of cleaning.

Patented easy mounting system for simple installation.

The package includes an one-way flap.

Consumption data

Energy consumption 34 kWh/year.

Ventilation efficiency class A.

Illumination efficiency class A.

Grease filter efficiency class B.

Sound level min. 41 dB / max. 54 dB normal mode.

Planning notes

Patented air recirculation module with activated charcoal filter can be installed in the upper cabinet. The activated carbon filter can be changed from the front by simply pulling out the activated charcoal filter.

The door of the upper cabinet must be fully open in order to change the activated charcoal filter.

To be installed in an upper cabinet without base.

The required cavity depth of the upper cabinet together with the lowering frame measures 335 mm.

The required cavity height of the upper cabinet together with the lowering frame measures 600 mm.

Clearance above gas appliances min. 65 cm (more than total load gas 12 kW min. 70 cm).

Clearance above electric appliances min. 43 cm.

When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.

Connection

Total connected load 146 W.

Connecting cable 1.8 m, pluggable.

Air recirculation module with activated charcoal filter

AA 442 810

Air recirculation module with activated charcoal filter

For air recirculation.

Can be combined with island and wall-mounted hood AI 442/AW 442.

Odour reduction comparable to air extraction mode (95%).

Noise reduction of up to 3 dB when compared to conventional air recirculation filter systems.

Extended change interval for the activated charcoal filter

(approx. 1–1.5 years depending on cooking frequency).

For installation on the inner chimney.

Consisting of filter bracket, 2 activated charcoal filter, flexible hose and

2 hose clamps.

AA 200 812

For air recirculation.

Can be combined with wall-mounted hoods AW 240

Odour reduction comparable to air extraction mode (95%).

Noise reduction of up to 3 dB when compared to conventional recirculation filter systems.

Extended change interval for the activated charcoal filter.

For installation on the external chimney or internal chimney.

Includes design panel, wall fastening, activated charcoal filter, flexible hose and 2 hose clamps.

AA 200 816

For air recirculation.

Can be combined with island hoods AI 240.

Odour reduction comparable to air extraction mode (95%).

Noise reduction of up to 3 dB when compared to conventional air recirculation filter systems.

Extended change interval for the activated charcoal filter.

For installation on the internal chimney.

Includes design panel, activated charcoal filter, flexible hose and 2 hose clamps.

AA 211 812

AA 010 810

For air recirculation.
 Can be combined with ceiling ventilation AC 250 and AC 402.
 Odour reduction comparable to air extraction mode (95%).
 Extended change interval for the activated charcoal filter.
 Comprises design panel, wall mount, activated charcoal filter, flexible pipe and 2 hose clamps.
 Pipe connection to the front, sideways or at the top.
 Connecting pipe DN 150 round.
 Recommended minimum gap between filter openings and wall: 100 cm.

**Air recirculation module for CV 28.****CA 282 811**

For air recirculation.
 Can be combined with the flex induction cooktop with integrated ventilation system CV 28..
 For installation in the cabinet.
 Plinth height min. 10 cm.
 For optimum performance, the recirculated air requires sufficient space in the plinth to escape (outflow surface area at least 720 cm²).
 Odour reduction air recirculation 89%.
 Extended change interval for the activated charcoal filter (approx. 1–1.5 years depending on cooking frequency).
 Filters can be replaced from the front or rear. Accessibility needs to be determined during installation already.
 Allow accessibility to air recirculation module in the lower cabinet for replacing the filter.
 Consists of 1 x 90° bend and 3 extensions for deeper worktops, 1 activated charcoal filter, flexible hose, 4 extensions for height adjustment, 1 x 90° bend with diffuser for the plinth and 1 air recirculation module mount.

AA 210 490

Lowering frame for 90 cm flat kitchen hood

AA 210 460

Lowering frame for 60 cm flat kitchen hood

Can be combined with flat kitchen hood series 200.

The patented lowering frame allows the flat kitchen hood to disappear completely into the upper cabinet.

For assembly directly on the kitchen wall or reinforced upper cabinet. The required cavity depth of the upper cabinet together with the lowering frame measures 335 mm.

In combination with a back wall panel > 5 mm the lowering frame needs to be lined and the cavity depths must be adapted accordingly.

Fitting directly to the kitchen wall

AA 400 510

Window contact switch

Can be combined with motorless appliances 400 series.
When installing a ventilation hood with air extraction mode and a chimney-vented fireplace, the power supply line of the ventilation appliance needs a suitable safety switch.
The window contact switch is suitable for this purpose.
The ventilation appliance only works when the window is open if a window contact switch is connected. The lighting works even if the window is closed.

For connection of round pipe DN 150 or flat pipe DN 150. Wall breakthrough \varnothing 155 mm.

Accessories | special accessories for ventilation appliances

Excellent performance thanks to optimal ducting and installation.

Intelligently selecting and installing the duct system not only has a very positive effect on the output of the ventilation system; it also minimises the noise generated. It is therefore decisive for the efficiency of the entire ventilation system.

The duct type.

In Gaggenau's accessories catalogue, customers can select the type of duct appropriate to their needs, whether aluflex pipe, round duct or a flat duct system. Depending on the duct type, they can choose from the nominal sizes DN 150 and DN 200. For maximum output with minimal noise, the diameter should always be as large as possible.

For straight ducting, the use of plastic or metal ducts with smooth, level inner surfaces is recommended. These enable a laminar flow of air during extraction, without air turbulence. For sections that are not straight and for bends, aluflex pipe are preferred because they make it possible to avoid hard edges.

Where space limitations are a concern, the first choice is the Gaggenau flat duct system. The remarkable design with special conducting fins in the bends and junction pieces allow for a very low height and large nominal size, thus ensuring very efficient air circulation. This also applies in situations where there are many bends. We strongly discourage the use of other flat ducts due to the high output losses in duct bends, duct corners and junction pieces.

Spiral and corrugated ducts should definitely not be used. In addition to displaying the worst flow conditions, these types also tend to flutter and thus generate noise.

The duct diameter.

A good guideline here is: The duct diameter should be as large and constant as possible, while the ducting should be as short and straight as possible. The wall outlet must correspond to the duct diameter.

Additional planning notes for Vario cooling 400 series

The side walls of the adjacent cabinetry have to be dimensionally stable, as the Vario cooling appliances are secured in the niche with only an anti-tilt bracket on the top back and on the bottom at the side.

Vario cooling appliances can be installed handle to handle as a side-by-side combination. In this case the side-by-side installation kit RA 460 000 is required. If the distance between the appliances is greater than 16 mm or less than 160 mm or the environment very humid the additional side heating element RA 460 013 needs to be installed between the appliances to avoid condensation. If the appliances are combined hinge to handle in a very humid environment the additional side heating element RA 460 013 is required as well. It can be omitted if the distance between the appliances is greater than 160 mm. The additional side heating element RA 460 013 does not take up any additional space. It is already included in the niche dimensions.

If the Vario cooling appliances are joined together hinge to hinge an additional stable side wall must be foreseen. If restrictions in use are accepted (no simultaneous opening of the doors possible) the appliances can be joined together directly, using the additional side heating element RA 460 013.

When installing a Vario cooling appliance from the 400 series handleless next to a BO/BM/BS/CM from the oven 400 series, a minimum lateral distance of 30 mm is required, if the door of the Vario cooling appliance opens towards the BO/BM/BS/CM. When installing a Vario cooling appliance from the 400 series next to a BO/BM/BS from the ovens 400 series, a lateral distance of 60 mm is required, if the BO/BM/BS retrofitted handle is on the same side as the Vario cooling appliance door hinge. For the same installation next to a BOP/BMP/BSP from the ovens 200 series, a distance of 40 mm is required.

Door opening angle

To ensure correct kitchen planning it is essential to take into account the opening angle of the appliance door (plus fitted cabinet door and handle). There should be no possibility of collision with other kitchen furnishings (worktops, handles of other cabinetry etc.) or parts of the room (walls, protrusions etc.). The space needed for the hinge and the consequential distance to the adjacent cabinetry and its handle can, depending on the panel thickness, be seen in the following drawing. The drawing assumes a panel thickness of 19 mm. If a collision occurs, the following options are available to remedy the situation: Restrict the door opening angle to 90° (standard 115°). Pin to restrict the angle is enclosed with the appliance. Due to limitation in use, it is not recommended to install a freezer (RF 411, RF 461, RF 471) next to a wall which requires a door angle of 90°. If the restrictions in use are accepted, the ice storage container must be exchanged for the small ice storage container (RA 448 220). This must be done prior fixing the door. Fit a spacer between the appliance and the cabinetry that it would collide with. Rearrange surrounding cabinetry or appliance.

The hinge travel and resulting clearances from adjacent furniture units and handles can be found from the drawing while allowing for the thickness of the front panel. In the drawing, a furniture unit front panel thickness of 19 mm was assumed.

Wall clearance RB 492/RY 492

In the drawing, a unit front thickness of 19 mm and a Gaggenau unit handle of 49 mm were taken as a basis.

Wall clearance RB 472/RC/RF/RW

Recess width			
C	D	E1	E2
457 mm	525 mm	235 mm	265 mm
610 mm	677 mm	299 mm	330 mm
762 mm	830 mm	364 mm	395 mm
914 mm	980 mm	428 mm	460 mm

In the drawing, a unit front thickness of 19 mm and a Gaggenau unit handle of 49 mm were taken as a basis.

Notes:

- The adjustable feet have an adjustment range of +35 mm to -13 mm. The standard height displayed in the pictures is 0 mm.
- For proper ventilation of the appliance, the clearance between the floor and bottom edge of the cabinet front must be at least 100 mm.
- The panel thickness of customised doors can range from between 19 mm and 38 mm (in the picture 19 mm).

Unlike conventional built-in appliances, Vario cooling appliances stand on the floor. This means that the installation niche is a space in a line of kitchen units.

Installation niche

The specified dimensions of the installation niche must be observed to guarantee the proper installation of the appliance and the design of the cabinet front. It is particularly important that the installation niche is square. The side walls must be smooth, not have any protrusions or unevenness. Use the appropriate tools, e.g. spirit level, diagonal measurements, etc. to determine whether the installation niche is square. The side walls and the crown of the installation niche must be at least 16 mm thick.

Installation niche for an individual appliance:

A

Area for installation the water connection

B

Area for installation the electrical connection must be outside the niche

C

Depth of installation niche, depending on kitchen design.
C = 610 mm minimum!

X

Width of installation niche, refer to the table below for more details:

Appliance type	Width of the niche X
451 mm	457 mm
603 mm	610 mm
756 mm	762 mm
908 mm	914 mm

Installation niche for a side-by-side solution:

In a side-by-side solution, there are many ways to combine the appliances. The width of the installation niche is calculated from the sum of the widths of the individual appliances. The height and depth of the installation niche correspond to the specifications for the individual appliances. It is important to comply with the dimensions in the area set aside for electric and water connections. For the precise dimensions, please refer to the details given for individual appliances.

Location

The appliance should be installed in a dry, well ventilated room. The location of the appliance should not be subject to direct sunlight or near a source of heat, such as a cooker, a radiator, etc. If installation next to a heat source is unavoidable, use a suitable insulating plate or observe the following minimum distances from the heat source:
– 3 cm to electric or gas cookers.
– 30 cm to an oil-fired or solid-fuel cooker.
The floor of the installation location must not give way; if required, reinforce floor. To ensure that the ice maker functions correctly, the appliance must be upright.

Surface

To ensure that the appliance is installed securely and functions properly, the surface must be level and even. The floor must consist of a hard, rigid material. The floor in the installation area must have the same height as the floor in the rest of the room. Due to the heavy weight of a fully loaded appliance, the floor beneath must be stable. If in doubt, consult an architect, structural engineer or construction expert.

Neighbouring cabinetry

The new appliance is screwed firmly in place with the neighbouring cabinet parts. Care should be taken to ensure that all cupboards onto which something is fastened, are connected firmly to the floor or the wall. The thickness of the plinth can be a maximum 19 mm.

Base area

Important!
Poor ventilation leads to damage to the appliance!
Under no circumstances is it permitted to cover the air inlets and the exhaust air outlets of the appliance in the lower base area. You must observe the minimum distance of 100 mm between the upper edge of the floor and the bottom edge of the cabinet door of the appliance. Take this into consideration also when adjusting the appliance feet.

In relation to the standard height, the maximum height of the base board is 102 mm. The plinth can be maximum 19 mm thick.

Adhesive connectors are supplied on the front panel of the appliance for fitting the base board.

The air inlets and the exhaust air outlets of the appliance are located above the base board. They must not be covered.

Base detail

Based on the standard appliance height, the height of the plinth is 102 mm. Maximum plinth thickness 19 mm.

For design reasons, it may be necessary to increase the distance between the upper edge of the floor and the bottom edge of the cabinet door of the appliance, so that it extends beyond the standard dimension of 102 mm. The maximum dimension is 181 mm. If this is the case, air inlets and exhaust air outlets would become visible!

Crown

The height of the cabinet door on the appliance is dependent on:

- the overall height of the appliance,
- the distance from the bottom edge of the cabinet door to the floor,
- the appliance type (one-door or multi-door appliances).

The overall height of the appliance is 2.029 mm.

The height can be adjusted within a range of -13 mm to +35 mm. You must observe the minimum distance of 100 mm between the upper edge of the floor and the bottom edge of the cabinet door of the appliance.

This height can vary depending on the conditions at the site. It is possible, e.g. for design reasons, to lengthen the cabinet door upwards by extending it beyond the top of the appliance.

Important!
It must be ensured that the crown of the installation niche always has a depth of at least 100 mm (measured from the front edge of the appliance). Only then can the secure installation of the appliance in the installation niche be guaranteed.

The cabinetry, the height of the base board, the overall height of the kitchen and other determining dimensions of the kitchen must be taken into account, in order to plan the exact positioning of the cabinet door so that the appliance integrates perfectly into the overall picture of the kitchen.

The following diagrams show the basic dimensions of the special accessories door fronts/door front frames for various appliances.

The dimensions of the doors shown are designed for the following basic specifications:

- Height of the base board: 102 mm
- Overall height of the installation niche: 2.134 mm
- Gap: 3 mm
- Panel thickness: 19 mm

These specifications provide you with a good starting point for a variety of kitchen designs.

When designing a customised cabinet door, please ensure that the back of the cabinet door is visible to a height of 205 mm over the floor when opening the appliance door and adapt to the front design. All diagrams are also valid for doors without handle.

Important!

The following diagrams are not a substitute for detailed designs. Compliance with specified requirements relating to kitchen design is essential.

Planning principle for an individual appliance

Vertical cut Installation niche

Installation niche for an individual cooling appliance (example: 762 mm wide)

In this example, the installation niche is formed by two tall cupboards (left and right) with an appropriate crown to the niche.

The cabinet door for the appliance comes in an identical design to the other kitchen fronts.

Requirements for the installation niche:

- The side walls of the installation niche must be completely even and flat along their entire depth
- Crown is at least 100 mm deep and made of a solid material (min. 16 mm thick)
- Width of the installation niche: 762 mm
- Depth of the installation niche: min. 610 mm

The side walls of the installation niche must be completely even and flat along their entire depth.

Horizontal cut Installation niche

Vertical cut Installation niche

Installation niche for a side-by-side solution

- 610 mm cooling appliance (right)
- 457 mm freezer (left)

In this example, the installation niche is formed by a tall cupboard (left) and a stable plinth (right) together with an appropriate crown for the niche.

The cabinet door for both appliances comes in an identical design to the other kitchen fronts.

Requirements for the installation niche:

- The side walls of the installation niche must be completely even and flat along their entire depth
- Crown is at least 100 mm deep and made of a solid material (min. 16 mm thick)
- Width of the installation niche:
 $610 \text{ mm} + 457 \text{ mm} = 1.067 \text{ mm}$
- Depth of the installation niche: min. 610 mm

The side walls of the installation niche must be completely even and flat along their entire depth.

Notes: Door hinges on the outside. Change door hinge of RW.

If using the stainless steel fronts with a handle (installation accessories), select the correct door hinges for the RW.

Side-by-side solution 3

RW 414 / RY 492

Usability limitations: Not all doors can be opened at the same time. The left door of the RY may collide with the handle of the RW.

Installation accessories: 1x RA 460 000 installation accessories for side-by-side installation (SxS)*.

Notes: Fitting the left RY doors at 90° is recommended. Change door hinge of RW.

If using the stainless steel fronts with a handle (installation accessories), select the correct door hinges for the RW.

Combination of 3

RF 461 / RW 466 / RC 462

Usability limitations: The doors of RW and RC cannot be opened at the same time, but one after another.

Installation accessories: 2x RA 460 000 installation accessories for side-by-side installation (SxS)*.

Notes: All three appliances must be connected to each other before installation and pushed together into the installation niche.

Maximum distance

RF 471 / RF 463 / RW 466 / RC 472

Usability limitations: No limitation. All doors can be opened fully.

Installation accessories: 2x RA 460 000 (SxS)*.

Notes: Two separate installation niches. Clearance is large enough to open all doors at the same time. Change door hinge of RW 466.

If using the stainless steel fronts with a handle (installation accessories), select the correct door hinges for the RW.

Distance ≥ 160 mm

RF 471 / RF 463 / RW 466 / RC 472
Usability limitations: The middle doors cannot be opened at the same time.

Installation accessories: 2x RA 460 000 (SxS)*.

Notes: Two separate installation niches. The clearance between the two installation niches is greater than 160 mm. Change door hinge of RW.

If using the stainless steel fronts with a handle (installation accessories), select the correct door hinges for the RW.

Distance ≤ 160 mm

RF 471 / RF 463 / RW 466 / RC 472
Usability limitations: It may be necessary to open the middle doors one after the other, rather than at the same time.

Installation accessories: 2x RA 460 000 (SxS)*, 1x RA 460 013 (HE)*.

Notes: Two separate installation niches with a stable plinth between them. The clearance between the two installation niches is less than 160 mm. Therefore, an additional side heating element is required. Change door hinge of RW. If using the stainless steel fronts with handle (installation accessories), select the correct door hinges for the RW.

Combination of 4

RF 471 / RF 463 / RW 466 / RC 472
Usability limitations: The middle doors cannot be opened at the same time.

Installation accessories: 3x RA 460 000 installation accessories for side-by-side installation (SxS)*.

Notes: All four appliances must be connected to each other before installation and pushed together into the installation niche. Change door hinge of RF 471 and RW 466. If using the stainless steel fronts with handle (installation accessories), select the correct door hinges for the RW.

Combination of 4 - alternative

RF 471 / RF 463 / RW 466 / RC 472
Usability limitations: If the middle door is open, then neither of the outer doors can be opened.

Installation accessories: 3x RA 460 000 installation accessories for side-by-side installation (SxS)*.

Notes: The appliances in the middle are connected side-by-side. Connecting the others will require additional side heating elements. All four appliances must be connected to each other before installation and pushed together into the installation niche.

Footnote:

*SxS Accessory for side-by-side installation. In an very humid environment always use the additional side heating element instead of the accessory for side-by-side installation.

*HE Additional side heating element. Always required, if the distance between the appliances is greater than 16 mm or less than 160 mm.

Wine climate cabinet 200 series**RW 222**

- Two independently controllable climate zones
- Consistent temperatures with exact control from +5 °C to +20 °C
- Humidity control
- Extendable bottle trays in beech and aluminium
- Presentation light option
- Low-vibration operation
- Capacity 48 bottles

Handling

Electronic temperature control with digital display.

Touch keys.

Presentation light option in each climate zone, dimmable.

Interior lighting with automatic dimming with opening and closing of door.

Technical Features

Dynamic cold air distribution.

Automatic defrosting with defrost water evaporation.

Cushioned door closing system integrated in door hinge.

1 activated charcoal air filter for both climate zones.

UV-protection.

Open-door and malfunction alarm.

Child lock.

Features

Capacity 48 bottles (based on 0.75/l standard bottles).

6 bottle trays, 4 of which are extendable.

Storage of magnum bottles possible.

LED lighting.

Net volume 158 litres.

Consumption data

Energy efficiency class A at a range of energy efficiency classes from A+++ to G.

Energy consumption 151 kWh/year.

Noise level 35 dB (re 1 pW).

Planning notes

Flat hinge.

Door hinge right, reversible.

Height-adjustable feet.

Door opening angle of 115°, fixable at 90°.

Max. door panel weight 20 kg.

Door panel thickness

min. 16 mm/max. 22 mm.

The mains socket needs to be planned outside the built-in niche.

For a side-by-side installation every appliance must be planned in its own niche.

When combining the wine climate cabinet with cooling appliances other than a second wine climate cabinet, these must have side heating to avoid condensation. Without side heating a clearance of min. 150 mm is to be kept between the appliances.

No transport/operation above 1.500 m sea level.

Connection

Total connected load 0.130 kW.

Connecting cable 2.0 m, with plug.

**Bottle storage**

Additional planning notes for standard dishwashers (without flexible hinge)

For niche heights from 815 to 855 mm, in most cases, the 81.5 cm high dishwasher must be planned, regardless of the plinth height.

For niche heights from 885 to 925 mm, in most cases, the 86.5 cm high dishwasher must be planned, regardless of the plinth height.

If the niche height amounts to 865 or 875 mm, please note:
Whether the 81.5 cm high dishwasher or the 86.5 cm high dishwasher can be used here depends on the plinth height.

For dishwasher with remaining time projection, the maximum plinth height must be reduced by 30 mm to provide an optimal display.

Additional planning notes for dishwashers with flexible hinge

For niche heights from 815 to 860 mm, in most cases, the 81.5 cm high dishwasher must be planned, regardless of the plinth height.

For niche heights from 880 to 925 mm, in most cases, the 86.5 cm high dishwasher must be planned, regardless of the plinth height.

If the niche height amounts between 865 and 875 mm, please note: Whether the 81.5 cm high dishwasher or the 86.5 cm high dishwasher can be used here depends on the plinth height.

If the installation of a dishwasher with **flexible hinge** is necessary or not depends on several factors.

The door panels cannot be used with dishwashers with flexible hinge.

Gaggenau and Home Connect*

The difference is Gaggenau.

This is the beginning of the future of cooking. Aided by a digital device, the private chef can, for instance, pre-heat the oven, turn on ventilation, start the dishwasher, order accessories from the eShop, download digital user manuals and have a technician run a diagnostic check, all remotely.

Integrating into different home managements systems ensures the kitchen remains the heart of the digital home. The private chef can ask Amazon Alexa to prepare a cup of coffee and turn on the ventilation while checking remaining time of the oven.

*The use of the Home Connect functionality depends on the Home Connect services, which are not available in every country. For further information please check: home-connect.com.

- Connect:
Remotely control** and monitor. Enable remote diagnosis by an online technician.
- Access:
Purchase accessories via eShop, download user manuals and utilise our partnering network.
- Integration:
Compatible with different home management system.

This is just the start, explore the possibilities at home-connect.com.

**Not applicable for cooktops, cooktops are not intended for unattended use – cooking process must be supervised.

The Gastronorm system provides the basis for cookware in the professional kitchen. It enables a smooth continuum from the preparation and cooking stages right through to serving at the table and storage. The Gastronorm inserts from Gaggenau have been adapted to match our Vario cooling 200 series, our induction cooktops, our Combi-steam and steam ovens, our ovens as well as our dishwashers. Furthermore, the Gastronorm sink represents yet another valuable addition to the process chain.

Prepare.
To prepare in combination with kitchen sinks in the Gastronorm format.

Keep fresh.
To keep fresh with appliances of the Vario cooling 200 series.

Cook.
To cook on induction cooktops VI, CI and CX, in our Combi-steam and steam ovens BS/BSP or our ovens BO/BOP in combination with the pull-out system BA 018/BA 016.

Keep warm.
To keep warm in the Gaggenau warming drawers WS/WSP.

Regenerate/warm up.
To regenerate in our Combi-steam and steam ovens BS/BSP as well as warming up on our induction cook-tops VI, CI and CX or in our ovens BO/BOP in combination with the pull-out systems BA 018/BA 016.

Dishwashing.
Optimal cleaning and drying of the GN inserts thanks to the GN insert holder.

Accessories in the Gaggenau Gastronorm system

For usage in the various Gaggenau appliances the following accessories in the Gaggenau Gastronorm system are available.

Gastronorm insert

GN 114/124/144/154

These high-walled, sturdy inserts made from hygienic stainless steel are ideal for cooking with steam and equally practical for storage in the refrigerator or serving at the table. They are available both in hygienic stainless steel design as well as with non-stick coating. Both are dishwasher-safe. The non-stick coating of the Gastronorm inserts prevent adherence of food and are therefore particularly easy to clean. For cooking several meals simultaneously, the cooking inserts for Combi-steam and steam ovens in the GN 2/3 format can be combined as required with smaller inserts that are available as special accessories in the GN 1/3 format. For practical food preparation, the inserts fit snugly into any Gastronorm sink.
