The bearing capacity and stability, in the case of thin worktops in particular, must be supported using suitable substructures. Take into account the appliance weight and additional loads. Installation is possible in worktops made of stone, synthetics or solid wood. Heat resistance and watertight sealing of the cut edges must be observed. Concerning other materials please consult the worktop manufacturer.  
 The groove must be continuous and even, so that uniform placing of the appliance on the gasket is ensured. Do not use discontinuous lining. The joint width may vary due to size tolerances of the combinations and of the worktop cut-out.  
 If installing several appliances in individual cut-outs allow for a division bar of minimum 50 mm between the individual cut-outs.  
 Operates with magnetic (induction) iron pots and pans only. For an optimal heat distribution, the use of sandwich bottom cookware is recommended. Appliance can be snapped into the worktop from above.  
 Appliance weight: approx. 23.

**Connection**  
 Total connected load 11.1 KW.  
 Connecting cable 1.5 m without plug.  
 Power consumption standby/display off 0.5 W.  
 Power consumption standby/network 1.9 W.  
 Please check the user manual for how to switch off the WiFi module.
